Attachments: PhosphateComments_ManateeCounty_1976comments.pdf

Greetings Honorable Commissioners,

I have attached a PDF of 1,976 letters from people concerned about the proposed rezone and approval of a master mining plan to allow phosphate mine expansion on approximately 3,500 acres.

Please let me know if you have any questions.

Jaclyn Lopez | Florida Director, Staff Attorney

Manatee County Officials

Dear Manatee County Officials,

I am writing to let you know that I do not want one more square inch of Florida's precious land dug up and poisoned by phosphate strip mining. The state's already home to the world's largest phosphate mine, and Mosaic seeks to mine an additional 50,000 acres. I urge you to do everything in your power to stop this destructive industry.

Phosphate strip mining is not in the public interest. It completely destroys landscapes and wildlife habitat, including wetlands, forests and streams needed by endangered species. It uses exorbitant amounts of precious groundwater, jeopardizing future water supplies and depriving wetlands, streams and rivers of water. And it creates approximately 30 million tons of radioactive byproduct each year that must be stored in 200-foot-tall phosphogypsum stacks and toxic waste ponds called "clay settling areas," which are slime ponds that will permanently cover approximately 40 percent of an average mine site. These are the largest repositories of hazardous waste in the nation.

With Florida's phosphate a finite resource, the few mining jobs gained in the short term do not justify the permanent loss of agricultural and ranching jobs, the negative health effects or the profound environmental damage. Please -- lend your support to the growing movement to end phosphate strip mining and protect Floridians' health, lands and wildlife.

Sincerely,

Eileen Wolfe
8105 Verna Bethany Road
Myakka City, FL 34251

The state's already home to the world's largest phosphate mine, and Mosaic seeks to mine an additional 50,000 acres. I urge you to do everything in your power to stop this destructive industry.

Phosphate strip mining is not in the public interest. It completely destroys landscapes and wildlife habitat, including wetlands, forests and streams needed by endangered species. It uses exorbitant amounts of precious groundwater, jeopardizing future water supplies and depriving wetlands, streams and rivers of water. And it creates approximately 30 million tons of radioactive byproduct each year that must be stored in 200-foot-tall phosphogypsum stacks and toxic waste ponds called "clay settling areas," which are slime ponds that will permanently cover approximately 40 percent of an average mine site. These are the largest repositories of hazardous waste in the nation.

With Florida's phosphate a finite resource, the few mining jobs gained in the short term do not justify the permanent loss of agricultural and ranching jobs, the negative health effects or the profound environmental damage. Please -- lend your support to the growing movement to end phosphate strip mining and protect Floridians' health, lands and wildlife.

Sincerely,

Kristina Lamons

The state's already home to the world's largest phosphate mine, and Mosaic seeks to mine an additional 50,000 acres. I urge you to do everything in your power to stop this destructive industry.

Phosphate strip mining is not in the public interest. It completely destroys landscapes and wildlife habitat, including wetlands, forests and streams needed by endangered species. It uses exorbitant amounts of precious groundwater, jeopardizing future water supplies and depriving wetlands, streams and rivers of water. And it creates approximately 30 million tons of radioactive byproduct each year that must be stored in 200-foot-tall phosphogypsum stacks and toxic waste ponds called "clay settling areas," which are slime ponds that will permanently cover approximately 40 percent of an average mine site. These are the largest repositories of hazardous waste in the nation.

With Florida's phosphate a finite resource, the few mining jobs gained in the short term do not justify the permanent loss of agricultural and ranching jobs, the negative health effects or the profound environmental damage. Please -- lend your support to the growing movement to end phosphate strip mining and protect Floridians' health, lands and wildlife.

Sincerely,

Rogers Turrentine

And it creates approximately 30 million tons of radioactive byproduct each year that must be stored in 200-foot-tall phosphogypsum stacks and toxic waste ponds called "clay settling areas," which are slime ponds that will permanently cover approximately 40 percent of an average mine site. These are the largest repositories of hazardous waste in the nation.

With Florida's phosphate a finite resource, the few mining jobs gained in the short term do not justify the permanent loss of agricultural and ranching jobs, the negative health effects or the profound environmental damage. Please -- lend your support to the growing movement to end phosphate strip mining and protect Floridians' health, lands and wildlife.

Sincerely,

audrey ross

Manatee County Officials

Dear Manatee County Officials,

I am writing to let you know that I do not want one more square inch of Florida's precious land dug up and poisoned by phosphate strip mining. The state's already home to the world's largest phosphate mine, and Mosaic seeks to mine an additional 50,000 acres. I urge you to do everything in your power to stop this destructive industry.

Phosphate strip mining is not in the public interest. It completely destroys landscapes and wildlife habitat, including wetlands, forests and streams needed by endangered species. It uses exorbitant amounts of precious groundwater, jeopardizing future water supplies and depriving wetlands, streams and rivers of water. And it creates approximately 30 million tons of radioactive byproduct each year that must be stored in 200-foot-tall phosphogypsum stacks and toxic waste ponds called "clay settling areas," which are slime ponds that will permanently cover approximately 40 percent of an average mine site. These are the largest repositories of hazardous waste in the nation.

With Florida's phosphate a finite resource, the few mining jobs gained in the short term do not justify the permanent loss of agricultural and ranching jobs, the negative health effects or the profound environmental damage. Manatee County Officials

Dear Manatee County Officials,

I am writing to let you know that I do not want one more square inch of Florida's precious land dug up and poisoned by phosphate strip mining. The state's already home to the world's largest phosphate mine, and Mosaic seeks to mine an additional 50,000 acres. I urge you to do everything in your power to stop this destructive industry.

Phosphate strip mining is not in the public interest. It completely destroys landscapes and wildlife habitat, including wetlands, forests and streams needed by endangered species. It uses exorbitant amounts of precious groundwater, jeopardizing future water supplies and depriving wetlands, streams and rivers of water. And it creates approximately 30 million tons of radioactive byproduct each year that must be stored in 200-foot-tall phosphogypsum stacks and toxic waste ponds called "clay settling areas," which are slime ponds that will permanently cover approximately 40 percent of an average mine site. These are the largest repositories of hazardous waste in the nation.

With Florida's phosphate a finite resource, the few mining jobs gained in the short term do not justify the permanent loss of agricultural and ranching jobs, the negative health effects or the profound environmental damage. Please -- lend your support to the growing movement to end phosphate strip mining and protect Floridians' health, lands and wildlife.

Sincerely,

Lana Touchstone
252 Grapewood St
Vallejo, CA 94591

Phosphate strip mining is not in the public interest. It completely destroys landscapes and wildlife habitat, including wetlands, forests and streams needed by endangered species. It uses exorbitant amounts of precious groundwater, jeopardizing future water supplies and depriving wetlands, streams and rivers of water. And it creates approximately 30 million tons of radioactive byproduct each year that must be stored in 200-foot-tall phosphogypsum stacks and toxic waste ponds called "clay settling areas," which are slime ponds that will permanently cover approximately 40 percent of an average mine site. These are the largest repositories of hazardous waste in the nation.

With Florida's phosphate a finite resource, the few mining jobs gained in the short term do not justify the permanent loss of agricultural and ranching jobs, the negative health effects or the profound environmental damage. Please -- lend your support to the growing movement to end phosphate strip mining and protect Floridians' health, lands and wildlife.

Sincerely,

Shawn Hall

Manatee County Officials

Dear Manatee County Officials,

I am writing to let you know that I do not want one more square inch of Florida's precious land dug up and poisoned by phosphate strip mining. The state's already home to the world's largest phosphate mine, and Mosaic seeks to mine an additional 50,000 acres. I urge you to do everything in your power to stop this destructive industry.

Dear Manatee County Officials,

I am writing to let you know that I do not want one more square inch of Florida's precious land dug up and poisoned by phosphate strip mining. The state's already home to the world's largest phosphate mine, and Mosaic seeks to mine an additional 50,000 acres. I urge you to do everything in your power to stop this destructive industry.

Phosphate strip mining is not in the public interest. It completely destroys landscapes and wildlife habitat, including wetlands, forests and streams needed by endangered species. It uses exorbitant amounts of precious groundwater, jeopardizing future water supplies and depriving wetlands, streams and rivers of water. And it creates approximately 30 million tons of radioactive byproduct each year that must be stored in 200-foot-tall phosphogypsum stacks and toxic waste ponds called "clay settling areas," which are slime ponds that will permanently cover approximately 40 percent of an average mine site. These are the largest repositories of hazardous waste in the nation.

With Florida's phosphate a finite resource, the few mining jobs gained in the short term do not justify the permanent loss of agricultural and ranching jobs, the negative health effects or the profound environmental damage. Please -- lend your support to the growing movement to end phosphate strip mining and protect Floridians' health, lands and wildlife.

Sincerely,

Marsha Stelzer

Phosphate strip mining is not in the public interest. It completely destroys landscapes and wildlife habitat, including wetlands, forests and streams needed by endangered species. It uses exorbitant amounts of precious groundwater, jeopardizing future water supplies and depriving wetlands, streams and rivers of water. And it creates approximately 30 million tons of radioactive byproduct each year that must be stored in 200-foot-tall phosphogypsum stacks and toxic waste ponds called "clay settling areas," which are slime ponds that will permanently cover approximately 40 percent of an average mine site. These are the largest repositories of hazardous waste in the nation.

With Florida's phosphate a finite resource, the few mining jobs gained in the short term do not justify the permanent loss of agricultural and ranching jobs, the negative health effects or the profound environmental damage. Please -- lend your support to the growing movement to end phosphate strip mining and protect Floridians' health, lands and wildlife.

Sincerely,

Yvonne Short

Manatee County Officials

Dear Manatee County Officials,

I am writing to let you know that I do not want one more square inch of Florida's precious land dug up and poisoned by phosphate strip mining. The state's already home to the world's largest phosphate mine, and Mosaic seeks to mine an additional 50,000 acres. I urge you to do everything in your power to stop this destructive industry.

Manatee County Officials

Dear Manatee County Officials,

I am writing to let you know that I do not want one more square inch of Florida's precious land dug up and poisoned by phosphate strip mining. The state's already home to the world's largest phosphate mine, and Mosaic seeks to mine an additional 50,000 acres. I urge you to do everything in your power to stop this destructive industry.

Phosphate strip mining is not in the public interest. It completely destroys landscapes and wildlife habitat, including wetlands, forests and streams needed by endangered species. It uses exorbitant amounts of precious groundwater, jeopardizing future water supplies and depriving wetlands, streams and rivers of water. And it creates approximately 30 million tons of radioactive byproduct each year that must be stored in 200-foot-tall phosphogypsum stacks and toxic waste ponds called "clay settling areas," which are slime ponds that will permanently cover approximately 40 percent of an average mine site. These are the largest repositories of hazardous waste in the nation.

With Florida's phosphate a finite resource, the few mining jobs gained in the short term do not justify the permanent loss of agricultural and ranching jobs, the negative health effects or the profound environmental damage. Please -- lend your support to the growing movement to end phosphate strip mining and protect Floridians' health, lands and wildlife.

Sincerely,

Mr Mazen Jishi

Dear Manatee County Officials,

I am writing to let you know that I do not want one more square inch of Florida's precious land dug up and poisoned by phosphate strip mining. The state's already home to the world's largest phosphate mine, and Mosaic seeks to mine an additional 50,000 acres. I urge you to do everything in your power to stop this destructive industry.

Phosphate strip mining is not in the public interest. It completely destroys landscapes and wildlife habitat, including wetlands, forests and streams needed by endangered species. It uses exorbitant amounts of precious groundwater, jeopardizing future water supplies and depriving wetlands, streams and rivers of water. And it creates approximately 30 million tons of radioactive byproduct each year that must be stored in 200-foot-tall phosphogypsum stacks and toxic waste ponds called "clay settling areas," which are slime ponds that will permanently cover approximately 40 percent of an average mine site. These are the largest repositories of hazardous waste in the nation.

With Florida's phosphate a finite resource, the few mining jobs gained in the short term do not justify the permanent loss of agricultural and ranching jobs, the negative health effects or the profound environmental damage. Please -- lend your support to the growing movement to end phosphate strip mining and protect Floridians' health, lands and wildlife.

Sincerely,

carol koehler

Phosphate strip mining is not in the public interest. It completely destroys landscapes and wildlife habitat, including wetlands, forests and streams needed by endangered species. It uses exorbitant amounts of precious groundwater, jeopardizing future water supplies and depriving wetlands, streams and rivers of water. And it creates approximately 30 million tons of radioactive byproduct each year that must be stored in 200-foot-tall phosphogypsum stacks and toxic waste ponds called "clay settling areas," which are slime ponds that will permanently cover approximately 40 percent of an average mine site. These are the largest repositories of hazardous waste in the nation.

With Florida's phosphate a finite resource, the few mining jobs gained in the short term do not justify the permanent loss of agricultural and ranching jobs, the negative health effects or the profound environmental damage. Please -- lend your support to the growing movement to end phosphate strip mining and protect Floridians' health, lands and wildlife.

Sincerely,

Mrs Margaret Cornelius

Manatee County Officials

Dear Manatee County Officials,

I am writing to let you know that I do not want one more square inch of Florida's precious land dug up and poisoned by phosphate strip mining. The state's already home to the world's largest phosphate mine, and Mosaic seeks to mine an additional 50,000 acres. I urge you to do everything in your power to stop this destructive industry.

Phosphate strip mining is not in the public interest. It completely destroys landscapes and wildlife habitat, including wetlands, forests and streams needed by endangered species. It uses exorbitant amounts of precious groundwater, jeopardizing future water supplies and depriving wetlands, streams and rivers of water. And it creates approximately 30 million tons of radioactive byproduct each year that must be stored in 200-foot-tall phosphogypsum stacks and toxic waste ponds called "clay settling areas," which are slime ponds that will permanently cover approximately 40 percent of an average mine site. Manatee County Officials

Dear Manatee County Officials,

The following letter, written by the Center for Biological Diversity, has my full endorsement.

I would like to preface it with the observation that intelligence without wisdom is a quality that makes the human race the most dangerous and destructive in existence. Intelligence with wisdom could save the planet. Which do you choose?

I am writing to let you know that I do not want one more square inch of Florida's precious land dug up and poisoned by phosphate strip mining. The state's already home to the world's largest phosphate mine, and Mosaic seeks to mine an additional 50,000 acres. I urge you to do everything in your power to stop this destructive industry.

Phosphate strip mining is not in the public interest. It completely destroys landscapes and wildlife habitat, including wetlands, forests and streams needed by endangered species. Phosphate strip mining is not in the public interest. It completely destroys landscapes and wildlife habitat, including wetlands, forests and streams needed by endangered species. It uses exorbitant amounts of precious groundwater, jeopardizing future water supplies and depriving wetlands, streams and rivers of water. And it creates approximately 30 million tons of radioactive byproduct each year that must be stored in 200-foot-tall phosphogypsum stacks and toxic waste ponds called "clay settling areas," which are slime ponds that will permanently cover approximately 40 percent of an average mine site. These are the largest repositories of hazardous waste in the nation.

With Florida's phosphate a finite resource, the few mining jobs gained in the short term do not justify the permanent loss of agricultural and ranching jobs, the negative health effects or the profound environmental damage. Please -- lend your support to the growing movement to end phosphate strip mining and protect Floridians' health, lands and wildlife.

Sincerely,

PETER GORBENKO

Manatee County Officials

Dear Manatee County Officials,

I am writing to let you know that I do not want one more square inch of Florida's precious land dug up and poisoned by phosphate strip mining. The state's already home to the world's largest phosphate mine, and Mosaic seeks to mine an additional 50,000 acres. I urge you to do everything in your power to stop this destructive industry.

These are the largest repositories of hazardous waste in the nation.

With Florida's phosphate a finite resource, the few mining jobs gained in the short term do not justify the permanent loss of agricultural and ranching jobs, the negative health effects or the profound environmental damage. Please -- lend your support to the growing movement to end phosphate strip mining and protect Floridians' health, lands and wildlife.

Sincerely,

Ricardo Pacheco

Manatee County Officials

Dear Manatee County Officials,

I am writing to let you know that I do not want one more square inch of Florida's precious land dug up and poisoned by phosphate strip mining. The state's already home to the world's largest phosphate mine, and Mosaic seeks to mine an additional 50,000 acres. I urge you to do everything in your power to stop this destructive industry.

Phosphate strip mining is not in the public interest. It completely destroys landscapes and wildlife habitat, including wetlands, forests and streams needed by endangered species. It uses exorbitant amounts of precious groundwater, jeopardizing future water supplies and depriving wetlands, streams and rivers of water. And it creates approximately 30 million tons of radioactive byproduct each year that must be stored in 200-foot-tall phosphogypsum stacks and toxic waste ponds called "clay settling areas," which are slime ponds that will permanently cover approximately 40 percent of an average mine site. These are the largest repositories of hazardous waste in the nation.

With Florida's phosphate a finite resource, the few mining jobs gained in the short term do not justify the permanent loss of agricultural and ranching jobs, the negative health effects or the profound environmental damage. Please -- lend your support to the growing movement to end phosphate strip mining and protect Floridians' health, lands and wildlife.

Sincerely,

Julie Martin

Phosphate strip mining is not in the public interest. It completely destroys landscapes and wildlife habitat, including wetlands, forests and streams needed by endangered species. It uses exorbitant amounts of precious groundwater, jeopardizing future water supplies and depriving wetlands, streams and rivers of water. And it creates approximately 30 million tons of radioactive byproduct each year that must be stored in 200-foot-tall phosphogypsum stacks and toxic waste ponds called "clay settling areas," which are slime ponds that will permanently cover approximately 40 percent of an average mine site. These are the largest repositories of hazardous waste in the nation.

With Florida's phosphate a finite resource, the few mining jobs gained in the short term do not justify the permanent loss of agricultural and ranching jobs, the negative health effects or the profound environmental damage. Please -- lend your support to the growing movement to end phosphate strip mining and protect Floridians' health, lands and wildlife.

Sincerely,

Lois White

Manatee County Officials

Dear Manatee County Officials,

I am writing to let you know that I do not want one more square inch of Florida's precious land dug up and poisoned by phosphate strip mining. The state's already home to the world's largest phosphate mine, and Mosaic seeks to mine an additional 50,000 acres. I urge you to do everything in your power to stop this destructive industry.

Manatee County Officials

Dear Manatee County Officials,

I am writing to let you know that I do not want one more square inch of Florida's precious land dug up and poisoned by phosphate strip mining. The state's already home to the world's largest phosphate mine, and Mosaic seeks to mine an additional 50,000 acres. I urge you to do everything in your power to stop this destructive industry.

Phosphate strip mining is not in the public interest. It completely destroys landscapes and wildlife habitat, including wetlands, forests and streams needed by endangered species. It uses exorbitant amounts of precious groundwater, jeopardizing future water supplies and depriving wetlands, streams and rivers of water. And it creates approximately 30 million tons of radioactive byproduct each year that must be stored in 200-foot-tall phosphogypsum stacks and toxic waste ponds called "clay settling areas," which are slime ponds that will permanently cover approximately 40 percent of an average mine site. These are the largest repositories of hazardous waste in the nation.

With Florida's phosphate a finite resource, the few mining jobs gained in the short term do not justify the permanent loss of agricultural and ranching jobs, the negative health effects or the profound environmental damage. Please -- lend your support to the growing movement to end phosphate strip mining and protect Floridians' health, lands and wildlife.

Sincerely,

Kathryn Buttles

Phosphate strip mining is not in the public interest. It completely destroys landscapes and wildlife habitat, including wetlands, forests and streams needed by endangered species. It uses exorbitant amounts of precious groundwater, jeopardizing future water supplies and depriving wetlands, streams and rivers of water. And it creates approximately 30 million tons of radioactive byproduct each year that must be stored in 200-foot-tall phosphogypsum stacks and toxic waste ponds called "clay settling areas," which are slime ponds that will permanently cover approximately 40 percent of an average mine site. These are the largest repositories of hazardous waste in the nation.

With Florida's phosphate a finite resource, the few mining jobs gained in the short term do not justify the permanent loss of agricultural and ranching jobs, the negative health effects or the profound environmental damage. Please -- lend your support to the growing movement to end phosphate strip mining and protect Floridians' health, lands and wildlife.

Sincerely,

Stephen Wallace

Manatee County Officials

Dear Manatee County Officials,

I am writing to let you know that I do not want one more square inch of Florida's precious land dug up and poisoned by phosphate strip mining. The state's already home to the world's largest phosphate mine, and Mosaic seeks to mine an additional 50,000 acres. I urge you to do everything in your power to stop this destructive industry.

These are the largest repositories of hazardous waste in the nation.

With Florida's phosphate a finite resource, the few mining jobs gained in the short term do not justify the permanent loss of agricultural and ranching jobs, the negative health effects or the profound environmental damage. Please -- lend your support to the growing movement to end phosphate strip mining and protect Floridians' health, lands and wildlife.

Sincerely,

Kathy Bradley
1220 Fredericksburg Drive South
Lugoff, SC 29078

Manatee County Officials

Dear Manatee County Officials,

I am writing to let you know that I do not want one more square inch of Florida's precious land dug up and poisoned by phosphate strip mining. The state's already home to the world's largest phosphate mine, and Mosaic seeks to mine an additional 50,000 acres. I urge you to do everything in your power to stop this destructive industry.

Phosphate strip mining is not in the public interest. It completely destroys landscapes and wildlife habitat, including wetlands, forests and streams needed by endangered species. It uses exorbitant amounts of precious groundwater, jeopardizing future water supplies and depriving wetlands, streams and rivers of water. And it creates approximately 30 million tons of radioactive byproduct each year that must be stored in 200-foot-tall phosphogypsum stacks and toxic waste ponds called "clay settling areas," which are slime ponds that will permanently cover approximately 40 percent of an average mine site. These are the largest repositories of hazardous waste in the nation.

With Florida's phosphate a finite resource, the few mining jobs gained in the short term do not justify the permanent loss of agricultural and ranching jobs, the negative health effects or the profound environmental damage. Please -- lend your support to the growing movement to end phosphate strip mining and protect Floridians' health, lands and wildlife.

Sincerely,

Mrs Jacquelya Sorby
4362 Yacht Harbor Drive

Dear Manatee County Officials,

I am writing to let you know that I do not want one more square inch of Florida's precious land dug up and poisoned by phosphate strip mining. The state's already home to the world's largest phosphate mine, and Mosaic seeks to mine an additional 50,000 acres. I urge you to do everything in your power to stop this destructive industry.

Phosphate strip mining is not in the public interest. It completely destroys landscapes and wildlife habitat, including wetlands, forests and streams needed by endangered species. It uses exorbitant amounts of precious groundwater, jeopardizing future water supplies and depriving wetlands, streams and rivers of water. And it creates approximately 30 million tons of radioactive byproduct each year that must be stored in 200-foot-tall phosphogypsum stacks and toxic waste ponds called "clay settling areas," which are slime ponds that will permanently cover approximately 40 percent of an average mine site. These are the largest repositories of hazardous waste in the nation.

With Florida's phosphate a finite resource, the few mining jobs gained in the short term do not justify the permanent loss of agricultural and ranching jobs, the negative health effects or the profound environmental damage. Please -- lend your support to the growing movement to end phosphate strip mining and protect Floridians' health, lands and wildlife.

Sincerely,

Cenie Cafarelli

The state's already home to the world's largest phosphate mine, and Mosaic seeks to mine an additional 50,000 acres. I urge you to do everything in your power to stop this destructive industry.

Phosphate strip mining is not in the public interest. It completely destroys landscapes and wildlife habitat, including wetlands, forests and streams needed by endangered species. It uses exorbitant amounts of precious groundwater, jeopardizing future water supplies and depriving wetlands, streams and rivers of water. And it creates approximately 30 million tons of radioactive byproduct each year that must be stored in 200-foot-tall phosphogypsum stacks and toxic waste ponds called "clay settling areas," which are slime ponds that will permanently cover approximately 40 percent of an average mine site. These are the largest repositories of hazardous waste in the nation.

With Florida's phosphate a finite resource, the few mining jobs gained in the short term do not justify the permanent loss of agricultural and ranching jobs, the negative health effects or the profound environmental damage. Please -- lend your support to the growing movement to end phosphate strip mining and protect Floridians' health, lands and wildlife.

Sincerely,

Mark Reback

And it creates approximately 30 million tons of radioactive byproduct each year that must be stored in 200-foot-tall phosphogypsum stacks and toxic waste ponds called "clay settling areas," which are slime ponds that will permanently cover approximately 40 percent of an average mine site. These are the largest repositories of hazardous waste in the nation.

With Florida's phosphate a finite resource, the few mining jobs gained in the short term do not justify the permanent loss of agricultural and ranching jobs, the negative health effects or the profound environmental damage. Please -- lend your support to the growing movement to end phosphate strip mining and protect Floridians' health, lands and wildlife.

Sincerely,

Louis Gauci

Manatee County Officials

Dear Manatee County Officials,

I am writing to let you know that I do not want one more square inch of Florida's precious land dug up and poisoned by phosphate strip mining. The state's already home to the world's largest phosphate mine, and Mosaic seeks to mine an additional 50,000 acres. I urge you to do everything in your power to stop this destructive industry.

Phosphate strip mining is not in the public interest. It completely destroys landscapes and wildlife habitat, including wetlands, forests and streams needed by endangered species. It uses exorbitant amounts of precious groundwater, jeopardizing future water supplies and depriving wetlands, streams and rivers of water. And it creates approximately 30 million tons of radioactive byproduct each year that must be stored in 200-foot-tall phosphogypsum stacks and toxic waste ponds called "clay settling areas," which are slime ponds that will permanently cover approximately 40 percent of an average mine site. These are the largest repositories of hazardous waste in the nation.

With Florida's phosphate a finite resource, the few mining jobs gained in the short term do not justify the permanent loss of agricultural and ranching jobs, the negative health effects or the profound environmental damage. Manatee County Officials

Dear Manatee County Officials,

I am writing to let you know that I do not want one more square inch of Florida's precious land dug up and poisoned by phosphate strip mining. The state's already home to the world's largest phosphate mine, and Mosaic seeks to mine an additional 50,000 acres. I urge you to do everything in your power to stop this destructive industry.

Phosphate strip mining is not in the public interest. It completely destroys landscapes and wildlife habitat, including wetlands, forests and streams needed by endangered species. It uses exorbitant amounts of precious groundwater, jeopardizing future water supplies and depriving wetlands, streams and rivers of water. And it creates approximately 30 million tons of radioactive byproduct each year that must be stored in 200-foot-tall phosphogypsum stacks and toxic waste ponds called "clay settling areas," which are slime ponds that will permanently cover approximately 40 percent of an average mine site. These are the largest repositories of hazardous waste in the nation.

With Florida's phosphate a finite resource, the few mining jobs gained in the short term do not justify the permanent loss of agricultural and ranching jobs, the negative health effects or the profound environmental damage. Please -- lend your support to the growing movement to end phosphate strip mining and protect Floridians' health, lands and wildlife.

Sincerely,

Dennis Kaplan

Dear Manatee County Officials,

What is WRONG with you people?? DO YOUR JOB and PROTECT THE CITIZENS THAT YOU TOOK AN OATH TO PROTECT. I do not want ONE more square inch of Florida's precious land dug up and poisoned by phosphate strip mining. The state's already home to the world's largest phosphate mine, and Mosaic seeks to mine an additional 50,000 acres. I urge you to do everything in your power to stop this destructive industry.

Why do we, as American citizens, have to beg and plead for environmental protection that CLEARLY benefits all humans from the people who are in charge of such matters and who we ELECTED to take care of such destruction and threat to our water supply and environment???? You need to take care of this IMMEDIATELY. Period. And Rick Scott is the MOST responsible of all of you pathetic excuses for public officials. Shame on ALL of you.

Phosphate strip mining is not in the public interest. It completely destroys landscapes and wildlife habitat, including wetlands, forests and streams needed by endangered species. It uses exorbitant amounts of precious groundwater, jeopardizing future water supplies and depriving wetlands, streams and rivers of water. Dear Manatee County Officials,

I am incredibly OUTRAGED that politicians continue to take the side of multi-million dollar planet raping companies! Please, PLEASE stop thinking old and ally yourselves with the innovative companies. Taxpayers are fed up hearing about one disastrous project after another where our lands are destroyed and blood suckers get rich. I'm usually not so blatant but this taxpayer is sick and tired of this and if you want me to go vote; do something worthy of it!!! I am writing to let you know that I do not want one more square inch of Florida's precious land dug up and poisoned by phosphate strip mining. The state's already home to the world's largest phosphate mine, and Mosaic seeks to mine an additional 50,000 acres. I urge you to do everything in your power to stop this destructive industry.

These are the largest repositories of hazardous waste in the nation.

With Florida's phosphate a finite resource, the few mining jobs gained in the short term do not justify the permanent loss of agricultural and ranching jobs, the negative health effects or the profound environmental damage. Please -- lend your support to the growing movement to end phosphate strip mining and protect Floridians' health, lands and wildlife.

Sincerely,

Sue Horwood

Manatee County Officials

Dear Manatee County Officials,

I am writing to let you know that I do not want one more square inch of Florida's precious land dug up and poisoned by phosphate strip mining. The state's already home to the world's largest phosphate mine, and Mosaic seeks to mine an additional 50,000 acres. I urge you to do everything in your power to stop this destructive industry.

Phosphate strip mining is not in the public interest. It completely destroys landscapes and wildlife habitat, including wetlands, forests and streams needed by endangered species. It uses exorbitant amounts of precious groundwater, jeopardizing future water supplies and depriving wetlands, streams and rivers of water. And it creates approximately 30 million tons of radioactive byproduct each year that must be stored in 200-foot-tall phosphogypsum stacks and toxic waste ponds called "clay settling areas," which are slime ponds that will permanently cover approximately 40 percent of an average mine site. These are the largest repositories of hazardous waste in the nation.

With Florida's phosphate a finite resource, the few mining jobs gained in the short term do not justify the permanent loss of agricultural and ranching jobs, the negative health effects or the profound environmental damage. Please -- lend your support to the growing movement to end phosphate strip mining and protect Floridians' health, lands and wildlife.

Sincerely,

Joyce Blanchard

Phosphate strip mining is not in the public interest. It completely destroys landscapes and wildlife habitat, including wetlands, forests and streams needed by endangered species. It uses exorbitant amounts of precious groundwater, jeopardizing future water supplies and depriving wetlands, streams and rivers of water. And it creates approximately 30 million tons of radioactive byproduct each year that must be stored in 200-foot-tall phosphogypsum stacks and toxic waste ponds called "clay settling areas," which are slime ponds that will permanently cover approximately 40 percent of an average mine site. These are the largest repositories of hazardous waste in the nation.

With Florida's phosphate a finite resource, the few mining jobs gained in the short term do not justify the permanent loss of agricultural and ranching jobs, the negative health effects or the profound environmental damage. Please -- lend your support to the growing movement to end phosphate strip mining and protect Floridians' health, lands and wildlife.

Sincerely,

Kimberley Vought

Manatee County Officials

Dear Manatee County Officials,

I am writing to let you know that I do not want one more square inch of Florida's precious land dug up and poisoned by phosphate strip mining. The state's already home to the world's largest phosphate mine, and Mosaic seeks to mine an additional 50,000 acres. I urge you to do everything in your power to stop this destructive industry.

Manatee County Officials

Dear Manatee County Officials,

I am writing to let you know that I do not want one more square inch of Florida's precious land dug up and poisoned by phosphate strip mining. The state's already home to the world's largest phosphate mine, and Mosaic seeks to mine an additional 50,000 acres. I urge you to do everything in your power to stop this destructive industry.

Phosphate strip mining is not in the public interest. It completely destroys landscapes and wildlife habitat, including wetlands, forests and streams needed by endangered species. It uses exorbitant amounts of precious groundwater, jeopardizing future water supplies and depriving wetlands, streams and rivers of water. And it creates approximately 30 million tons of radioactive byproduct each year that must be stored in 200-foot-tall phosphogypsum stacks and toxic waste ponds called "clay settling areas," which are slime ponds that will permanently cover approximately 40 percent of an average mine site. These are the largest repositories of hazardous waste in the nation.

With Florida's phosphate a finite resource, the few mining jobs gained in the short term do not justify the permanent loss of agricultural and ranching jobs, the negative health effects or the profound environmental damage. Please -- lend your support to the growing movement to end phosphate strip mining and protect Floridians' health, lands and wildlife.

Sincerely,

Tom Tamplin
Oaklands Way
Wallington, ot SM6 9RR

Manatee County Officials

Dear Manatee County Officials,

On Aug. 27, 2016 the Mosaic phosphate mining company created a 200-foot tall radioactive waste pile near Tampa, Florida, under which a sinkhole opened, spilling over 200 MILLION GALLONS OF RADIOACTIVE CONTAMINATED WASTEWATER INTO THE FLORIDAN AQUIFER, THE STATE'S MAIN SOURCE OF DRINKING WATER FOR BOTH HUMANS AND ANIMALS.

Yet Mosaic wants to dig up 50,000 more acres of Florida's biodiverse lands, leaving them stagnant, rotten, hazardous forever: 50,000 more acres of radioactive wasteland and poisoned waters.

I am writing to let you know that I do not want one more square inch of Florida's precious land dug up and poisoned by phosphate strip mining. The state is already home to the world's largest phosphate mine, and Mosaic seeks to mine an additional 50,000 acres. I urge you to do everything in your power to stop this destructive industry.

Phosphate strip mining is not in the public interest. It completely destroys landscapes and wildlife habitat, including wetlands, forests and streams needed by endangered species. It uses exorbitant amounts of precious groundwater, jeopardizing future water supplies and depriving wetlands, streams and rivers of water.

And it creates approximately 30 MILLION TONS OF RADIOACTIVE "BYPRODUCT" EVERY YEAR, which must be stored in 200-foot-tall phosphogypsum stacks and toxic waste ponds called "clay settling areas": slime ponds that will permanently cover approximately 40 percent of an average mine site.

These slime ponds are THE LARGEST REPOSITORIES OF HAZARDOUS WASTE IN THE NATION.

With Florida's phosphate a finite resource, the few mining jobs gained in the short term do not justify the permanent loss of agricultural and ranching jobs, the negative health effects or the profound environmental damage.

Please -- lend your support to the growing movement to END PHOSPHATE STRIP MINING!

Protect Floridians' health, lands and wildlife from a legacy of doom.

Sincerely,

Tami Calliope

Manatee County Officials

Dear Manatee County Officials,

I am writing to let you know that I do not want one more square inch of Florida's precious land dug up and poisoned by phosphate strip mining. The state's already home to the world's largest phosphate mine, and Mosaic seeks to mine an additional 50,000 acres. I urge you to do everything in your power to stop this destructive industry.

Phosphate strip mining is not in the public interest. It completely destroys landscapes and wildlife habitat, including wetlands, forests and streams needed by endangered species. It uses exorbitant amounts of precious groundwater, jeopardizing future water supplies and depriving wetlands, streams and rivers of water. And it creates approximately 30 million tons of radioactive byproduct each year that must be stored in 200-foot-tall phosphogypsum stacks and toxic waste ponds called "clay settling areas," which are slime ponds that will permanently cover approximately 40 percent of an average mine site. These are the largest repositories of hazardous waste in the nation.

With Florida's phosphate a finite resource, the few mining jobs gained in the short term do not justify the permanent loss of agricultural and ranching jobs, the negative health effects or the profound environmental damage. Please -- lend your support to the growing movement to end phosphate strip mining and protect Floridians' health, lands and wildlife.

Sincerely,

Linda Harrell
7449 Hendersonville Hwy
Yemassee, SC 29945

Manatee County Officials

Dear Manatee County Officials,

I write to let you know that I do not want one more square inch of Florida's precious land dug up and poisoned by phosphate strip mining. The state is already home to the world's largest phosphate mine, and as you know, a massive sinkhole below a phosphate strip mine near Tampa has been releasing radioactive waste into Florida's aquifer for weeks, threatening millions of people's drinking water. The mine's owner, Mosaic, and state officials reportedly knew about the problem since it began but "failed" to go public. Meanwhile, Mosaic seeks to mine an additional 50,000 acres.

Phosphate strip mining is not in the public interest. It destroys landscapes and wildlife habitat, including wetlands, forests and streams needed by endangered species. It uses exorbitant amounts of precious groundwater, jeopardizing future water supplies and depriving wetlands, streams and rivers of water. And it creates approximately 30 million tons of radioactive byproduct each year that must be stored in 200-foot-tall phosphogypsum stacks and toxic waste ponds called "clay settling areas," which are slime ponds that will permanently cover approximately 40 percent of an average mine site.

With Florida's phosphate a finite resource, the few mining jobs gained in the short term do not justify the permanent loss of agricultural and ranching jobs, the negative health effects or the profound environmental damage.

Please lend your support to ending phosphate strip mining and protect Floridians' health, lands and wildlife.

Sincerely,

Doug Morse
48 East San Carlos Avenue
St. Augustine, FL 32084

Manatee County Officials

Dear Manatee County Officials,

I am writing to let you know that I do not want one more square inch of Florida's precious land dug up and poisoned by phosphate strip mining. The state's already home to the world's largest phosphate mine, and Mosaic seeks to mine an additional 50,000 acres. I urge you to do everything in your power to stop this destructive industry.

Phosphate strip mining is not in the public interest. It completely destroys landscapes and wildlife habitat, including wetlands, forests and streams needed by endangered species. It uses exorbitant amounts of precious groundwater, jeopardizing future water supplies and depriving wetlands, streams and rivers of water. And it creates approximately 30 million tons of radioactive byproduct each year that must be stored in 200-foot-tall phosphogypsum stacks and toxic waste ponds called "clay settling areas," which are slime ponds that will permanently cover approximately 40 percent of an average mine site. These are the largest repositories of hazardous waste in the nation.

With Florida's phosphate a finite resource, the few mining jobs gained in the short term do not justify the permanent loss of agricultural and ranching jobs, the negative health effects or the profound environmental damage. Please -- lend your support to the growing movement to end phosphate strip mining and protect Floridians' health, lands and wildlife.

Sincerely,

Peri Edwards

It uses exorbitant amounts of precious groundwater, jeopardizing future water supplies and depriving wetlands, streams and rivers of water. And it creates approximately 30 million tons of radioactive byproduct each year that must be stored in 200-foot-tall phosphogypsum stacks and toxic waste ponds called "clay settling areas," which are slime ponds that will permanently cover approximately 40 percent of an average mine site. These are the largest repositories of hazardous waste in the nation.

With Florida's phosphate a finite resource, the few mining jobs gained in the short term do not justify the permanent loss of agricultural and ranching jobs, the negative health effects or the profound environmental damage. Please -- lend your support to the growing movement to end phosphate strip mining and protect Floridians' health, lands and wildlife.

Sincerely,

Keith Melton

Manatee County Officials

Dear Manatee County Officials,

I am writing to let you know that I do not want one more square inch of Florida's precious land dug up and poisoned by phosphate strip mining. The state's already home to the world's largest phosphate mine, and Mosaic seeks to mine an additional 50,000 acres. I urge you to do everything in your power to stop this destructive industry.

Phosphate strip mining is not in the public interest. It completely destroys landscapes and wildlife habitat, including wetlands, forests and streams needed by endangered species. It uses exorbitant amounts of precious groundwater, jeopardizing future water supplies and depriving wetlands, streams and rivers of water. And it creates approximately 30 million tons of radioactive byproduct each year that must be stored in 200-foot-tall phosphogypsum stacks and toxic waste ponds called "clay settling areas," which are slime ponds that will permanently cover approximately 40 percent of an average mine site. These are the largest repositories of hazardous waste in the nation.

Manatee County Officials

Dear Manatee County Officials,

I am writing to let you know that I do not want one more square inch of Florida's precious land dug up and poisoned by phosphate strip mining. The state's already home to the world's largest phosphate mine, and Mosaic seeks to mine an additional 50,000 acres. I urge you to do everything in your power to stop this destructive industry.

Phosphate strip mining is not in the public interest. It completely destroys landscapes and wildlife habitat, including wetlands, forests and streams needed by endangered species. It uses exorbitant amounts of precious groundwater, jeopardizing future water supplies and depriving wetlands, streams and rivers of water. And it creates approximately 30 million tons of radioactive byproduct each year that must be stored in 200-foot-tall phosphogypsum stacks and toxic waste ponds called "clay settling areas," which are slime ponds that will permanently cover approximately 40 percent of an average mine site. These are the largest repositories of hazardous waste in the nation.

With Florida's phosphate a finite resource, the few mining jobs gained in the short term do not justify the permanent loss of agricultural and ranching jobs, the negative health effects or the profound environmental damage. Please -- lend your support to the growing movement to end phosphate strip mining and protect Floridians' health, lands and wildlife.

Sincerely,

Marcia Bonta
168 Plummers Hollow Rd.
Tyrone, PA 16686

I am writing to let you know that I do not want one more square inch of Florida's precious land dug up and poisoned by phosphate strip mining. The state's already home to the world's largest phosphate mine, and Mosaic seeks to mine an additional 50,000 acres. I urge you to do everything in your power to stop this destructive industry.

Phosphate strip mining is not in the public interest. It completely destroys landscapes and wildlife habitat, including wetlands, forests and streams needed by endangered species. It uses exorbitant amounts of precious groundwater, jeopardizing future water supplies and depriving wetlands, streams and rivers of water. And it creates approximately 30 million tons of radioactive byproduct each year that must be stored in 200-foot-tall phosphogypsum stacks and toxic waste ponds called "clay settling areas," which are slime ponds that will permanently cover approximately 40 percent of an average mine site. These are the largest repositories of hazardous waste in the nation.

With Florida's phosphate a finite resource, the few mining jobs gained in the short term do not justify the permanent loss of agricultural and ranching jobs, the negative health effects or the profound environmental damage. Please -- lend your support to the growing movement to end phosphate strip mining and protect Floridians' health, lands and wildlife.

Sincerely,

Edward Kern

Phosphate strip mining is not in the public interest. It completely destroys landscapes and wildlife habitat, including wetlands, forests and streams needed by endangered species. It uses exorbitant amounts of precious groundwater, jeopardizing future water supplies and depriving wetlands, streams and rivers of water. And it creates approximately 30 million tons of radioactive byproduct each year that must be stored in 200-foot-tall phosphogypsum stacks and toxic waste ponds called "clay settling areas," which are slime ponds that will permanently cover approximately 40 percent of an average mine site. These are the largest repositories of hazardous waste in the nation.

With Florida's phosphate a finite resource, the few mining jobs gained in the short term do not justify the permanent loss of agricultural and ranching jobs, the negative health effects or the profound environmental damage. Please -- lend your support to the growing movement to end phosphate strip mining and protect Floridians' health, lands and wildlife.

Sincerely,
Paul Tarrant

Manatee County Officials

Dear Manatee County Officials,

I am writing to let you know that I do not want one more square inch of Florida's precious land dug up and poisoned by phosphate strip mining. The state's already home to the world's largest phosphate mine, and Mosaic seeks to mine an additional 50,000 acres. I urge you to do everything in your power to stop this destructive industry.

Dear Manatee County Officials,

I am writing to let you know that I do not want one more square inch of Florida's precious land dug up and poisoned by phosphate strip mining. The state's already home to the world's largest phosphate mine, and Mosaic seeks to mine an additional 50,000 acres. I urge you to do everything in your power to stop this destructive industry.

Phosphate strip mining is not in the public interest. It completely destroys landscapes and wildlife habitat, including wetlands, forests and streams needed by endangered species. It uses exorbitant amounts of precious groundwater, jeopardizing future water supplies and depriving wetlands, streams and rivers of water. And it creates approximately 30 million tons of radioactive byproduct each year that must be stored in 200-foot-tall phosphogypsum stacks and toxic waste ponds called "clay settling areas," which are slime ponds that will permanently cover approximately 40 percent of an average mine site. These are the largest repositories of hazardous waste in the nation.

With Florida's phosphate a finite resource, the few mining jobs gained in the short term do not justify the permanent loss of agricultural and ranching jobs, the negative health effects or the profound environmental damage. Please -- lend your support to the growing movement to end phosphate strip mining and protect Floridians' health, lands and wildlife.

Sincerely,

Cheryl Albert

And it creates approximately 30 million tons of radioactive byproduct each year that must be stored in 200-foot-tall phosphogypsum stacks and toxic waste ponds called "clay settling areas," which are slime ponds that will permanently cover approximately 40 percent of an average mine site. These are the largest repositories of hazardous waste in the nation.

With Florida's phosphate a finite resource, the few mining jobs gained in the short term do not justify the permanent loss of agricultural and ranching jobs, the negative health effects or the profound environmental damage. Please -- lend your support to the growing movement to end phosphate strip mining and protect Floridians' health, lands and wildlife.

Sincerely,

Olga Kalfopoulou

Manatee County Officials

Dear Manatee County Officials,

I am writing to let you know that I do not want one more square inch of Florida's precious land dug up and poisoned by phosphate strip mining. The state's already home to the world's largest phosphate mine, and Mosaic seeks to mine an additional 50,000 acres. I urge you to do everything in your power to stop this destructive industry.

Phosphate strip mining is not in the public interest. It completely destroys landscapes and wildlife habitat, including wetlands, forests and streams needed by endangered species. It uses exorbitant amounts of precious groundwater, jeopardizing future water supplies and depriving wetlands, streams and rivers of water. And it creates approximately 30 million tons of radioactive byproduct each year that must be stored in 200-foot-tall phosphogypsum stacks and toxic waste ponds called "clay settling areas," which are slime ponds that will permanently cover approximately 40 percent of an average mine site. These are the largest repositories of hazardous waste in the nation.

With Florida's phosphate a finite resource, the few mining jobs gained in the short term do not justify the permanent loss of agricultural and ranching jobs, the negative health effects or the profound environmental damage. Manatee County Officials

Dear Manatee County Officials,

I am writing to let you know that I do not want one more square inch of Florida's precious land dug up and poisoned by phosphate strip mining. The state's already home to the world's largest phosphate mine, and Mosaic seeks to mine an additional 50,000 acres. I urge you to do everything in your power to stop this destructive industry.

Phosphate strip mining is not in the public interest. It completely destroys landscapes and wildlife habitat, including wetlands, forests and streams needed by endangered species. It uses exorbitant amounts of precious groundwater, jeopardizing future water supplies and depriving wetlands, streams and rivers of water. And it creates approximately 30 million tons of radioactive byproduct each year that must be stored in 200-foot-tall phosphogypsum stacks and toxic waste ponds called "clay settling areas," which are slime ponds that will permanently cover approximately 40 percent of an average mine site. These are the largest repositories of hazardous waste in the nation.

With Florida's phosphate a finite resource, the few mining jobs gained in the short term do not justify the permanent loss of agricultural and ranching jobs, the negative health effects or the profound environmental damage. Please -- lend your support to the growing movement to end phosphate strip mining and protect Floridians' health, lands and wildlife.

Sincerely,

E K

Phosphate strip mining is not in the public interest. It completely destroys landscapes and wildlife habitat, including wetlands, forests and streams needed by endangered species. It uses exorbitant amounts of precious groundwater, jeopardizing future water supplies and depriving wetlands, streams and rivers of water. And it creates approximately 30 million tons of radioactive byproduct each year that must be stored in 200-foot-tall phosphogypsum stacks and toxic waste ponds called "clay settling areas," which are slime ponds that will permanently cover approximately 40 percent of an average mine site. These are the largest repositories of hazardous waste in the nation.

With Florida's phosphate a finite resource, the few mining jobs gained in the short term do not justify the permanent loss of agricultural and ranching jobs, the negative health effects or the profound environmental damage. Please -- lend your support to the growing movement to end phosphate strip mining and protect Floridians' health, lands and wildlife.

Sincerely,

Bruno Zacke

Manatee County Officials

Dear Manatee County Officials,

I am writing to let you know that I do not want one more square inch of Florida's precious land dug up and poisoned by phosphate strip mining. The state's already home to the world's largest phosphate mine, and Mosaic seeks to mine an additional 50,000 acres. I urge you to do everything in your power to stop this destructive industry.

Manatee County Officials

Dear Manatee County Officials,

I am writing to let you know that I do not want one more square inch of Florida's precious land dug up and poisoned by phosphate strip mining. The state's already home to the world's largest phosphate mine, and Mosaic seeks to mine an additional 50,000 acres. I urge you to do everything in your power to stop this destructive industry.

Phosphate strip mining is not in the public interest. It completely destroys landscapes and wildlife habitat, including wetlands, forests and streams needed by endangered species. It uses exorbitant amounts of precious groundwater, jeopardizing future water supplies and depriving wetlands, streams and rivers of water. And it creates approximately 30 million tons of radioactive byproduct each year that must be stored in 200-foot-tall phosphogypsum stacks and toxic waste ponds called "clay settling areas," which are slime ponds that will permanently cover approximately 40 percent of an average mine site. These are the largest repositories of hazardous waste in the nation.

With Florida's phosphate a finite resource, the few mining jobs gained in the short term do not justify the permanent loss of agricultural and ranching jobs, the negative health effects or the profound environmental damage. Please -- lend your support to the growing movement to end phosphate strip mining and protect Floridians' health, lands and wildlife.

Sincerely,

Jean Myers

And it creates approximately 30 million tons of radioactive byproduct each year that must be stored in 200-foot-tall phosphogypsum stacks and toxic waste ponds called "clay settling areas," which are slime ponds that will permanently cover approximately 40 percent of an average mine site. These are the largest repositories of hazardous waste in the nation.

With Florida's phosphate a finite resource, the few mining jobs gained in the short term do not justify the permanent loss of agricultural and ranching jobs, the negative health effects or the profound environmental damage. Please -- lend your support to the growing movement to end phosphate strip mining and protect Floridians' health, lands and wildlife.

Sincerely,

Celia Macias

Manatee County Officials

Dear Manatee County Officials,

I am writing to let you know that I do not want one more square inch of Florida's precious land dug up and poisoned by phosphate strip mining. The state's already home to the world's largest phosphate mine, and Mosaic seeks to mine an additional 50,000 acres. I urge you to do everything in your power to stop this destructive industry.

Phosphate strip mining is not in the public interest. It completely destroys landscapes and wildlife habitat, including wetlands, forests and streams needed by endangered species. It uses exorbitant amounts of precious groundwater, jeopardizing future water supplies and depriving wetlands, streams and rivers of water. And it creates approximately 30 million tons of radioactive byproduct each year that must be stored in 200-foot-tall phosphogypsum stacks and toxic waste ponds called "clay settling areas," which are slime ponds that will permanently cover approximately 40 percent of an average mine site. These are the largest repositories of hazardous waste in the nation.

With Florida's phosphate a finite resource, the few mining jobs gained in the short term do not justify the permanent loss of agricultural and ranching jobs, the negative health effects or the profound environmental damage. Manatee County Officials

Dear Manatee County Officials,

I am writing to let you know that I do not want one more square inch of Florida's precious land dug up and poisoned by phosphate strip mining. The state's already home to the world's largest phosphate mine, and Mosaic seeks to mine an additional 50,000 acres. I urge you to do everything in your power to stop this destructive industry.

Phosphate strip mining is not in the public interest. It completely destroys landscapes and wildlife habitat, including wetlands, forests and streams needed by endangered species. It uses exorbitant amounts of precious groundwater, jeopardizing future water supplies and depriving wetlands, streams and rivers of water. And it creates approximately 30 million tons of radioactive byproduct each year that must be stored in 200-foot-tall phosphogypsum stacks and toxic waste ponds called "clay settling areas," which are slime ponds that will permanently cover approximately 40 percent of an average mine site. These are the largest repositories of hazardous waste in the nation.

With Florida's phosphate a finite resource, the few mining jobs gained in the short term do not justify the permanent loss of agricultural and ranching jobs, the negative health effects or the profound environmental damage. Please -- lend your support to the growing movement to end phosphate strip mining and protect Floridians' health, lands and wildlife.

Sincerely,

Manatee County Officials

Dear Manatee County Officials,

I do not want one more square inch of Florida's land dug up and poisoned by phosphate strip mining. We are already home to the world's largest phosphate mines and Mosaic now wants to mine an additional 50,000 acres. Please do everything in your power to stop this destructive industry.

Phosphate strip mining completely destroys landscapes and wildlife habitat, including wetlands, forests, and streams needed by endangered species. It uses exorbitant amounts of groundwater, jeopardizing future water supplies and depriving wetlands and rivers of water. Perhaps most distressing, this brand of phosphate mining creates approximately 30 million tons of radioactive byproduct each year that must be stored in 200-foot-tall phosphogypsum stacks and toxic waste ponds called "clay settling areas." These icky slime ponds will go on to cover approximately 40 percent of an average mine site, permanently. These are the largest repositories of hazardous waste in the nation.

The phosphate in Florida is a finite resource. The permanent loss of agricultural and ranching jobs, negative health effects, and profound environmental damage cannot be justified by the few mining jobs gained in the short term.

Please -- lend your support to the growing movement to end phosphate strip mining and protect Floridians' health, lands, and wildlife. Thank you for your time.

Cheers,

Dr. Shannin Zevian

The state's already home to the world's largest phosphate mine, and Mosaic seeks to mine an additional 50,000 acres. I urge you to do everything in your power to stop this destructive industry.

Phosphate strip mining is not in the public interest. It completely destroys landscapes and wildlife habitat, including wetlands, forests and streams needed by endangered species. It uses exorbitant amounts of precious groundwater, jeopardizing future water supplies and depriving wetlands, streams and rivers of water. And it creates approximately 30 million tons of radioactive byproduct each year that must be stored in 200-foot-tall phosphogypsum stacks and toxic waste ponds called "clay settling areas," which are slime ponds that will permanently cover approximately 40 percent of an average mine site. These are the largest repositories of hazardous waste in the nation.

With Florida's phosphate a finite resource, the few mining jobs gained in the short term do not justify the permanent loss of agricultural and ranching jobs, the negative health effects or the profound environmental damage. Please -- lend your support to the growing movement to end phosphate strip mining and protect Floridians' health, lands and wildlife.

Sincerely,

Cindy Corradi

And it creates approximately 30 million tons of radioactive byproduct each year that must be stored in 200-foot-tall phosphogypsum stacks and toxic waste ponds called "clay settling areas," which are slime ponds that will permanently cover approximately 40 percent of an average mine site. These are the largest repositories of hazardous waste in the nation.

With Florida's phosphate a finite resource, the few mining jobs gained in the short term do not justify the permanent loss of agricultural and ranching jobs, the negative health effects or the profound environmental damage. Please -- lend your support to the growing movement to end phosphate strip mining and protect Floridians' health, lands and wildlife.

Sincerely,

Kim Sellon

Manatee County Officials

Dear Manatee County Officials,

I am writing to let you know that I do not want one more square inch of Florida's precious land dug up and poisoned by phosphate strip mining. The state's already home to the world's largest phosphate mine, and Mosaic seeks to mine an additional 50,000 acres. I urge you to do everything in your power to stop this destructive industry.

Phosphate strip mining is not in the public interest. It completely destroys landscapes and wildlife habitat, including wetlands, forests and streams needed by endangered species. It uses exorbitant amounts of precious groundwater, jeopardizing future water supplies and depriving wetlands, streams and rivers of water. And it creates approximately 30 million tons of radioactive byproduct each year that must be stored in 200-foot-tall phosphogypsum stacks and toxic waste ponds called "clay settling areas," which are slime ponds that will permanently cover approximately 40 percent of an average mine site. These are the largest repositories of hazardous waste in the nation.

With Florida's phosphate a finite resource, the few mining jobs gained in the short term do not justify the permanent loss of agricultural and ranching jobs, the negative health effects or the profound environmental damage. The state's already home to the world's largest phosphate mine, and Mosaic seeks to mine an additional 50,000 acres. I urge you to do everything in your power to stop this destructive industry.

Phosphate strip mining is not in the public interest. It completely destroys landscapes and wildlife habitat, including wetlands, forests and streams needed by endangered species. It uses exorbitant amounts of precious groundwater, jeopardizing future water supplies and depriving wetlands, streams and rivers of water. And it creates approximately 30 million tons of radioactive byproduct each year that must be stored in 200-foot-tall phosphogypsum stacks and toxic waste ponds called "clay settling areas," which are slime ponds that will permanently cover approximately 40 percent of an average mine site. These are the largest repositories of hazardous waste in the nation.

With Florida's phosphate a finite resource, the few mining jobs gained in the short term do not justify the permanent loss of agricultural and ranching jobs, the negative health effects or the profound environmental damage. Please -- lend your support to the growing movement to end phosphate strip mining and protect Floridians' health, lands and wildlife.

Sincerely,

Jennifer Faulkner

It uses exorbitant amounts of precious groundwater, jeopardizing future water supplies and depriving wetlands, streams and rivers of water. And it creates approximately 30 million tons of radioactive byproduct each year that must be stored in 200-foot-tall phosphogypsum stacks and toxic waste ponds called "clay settling areas," which are slime ponds that will permanently cover approximately 40 percent of an average mine site. These are the largest repositories of hazardous waste in the nation.

With Florida's phosphate a finite resource, the few mining jobs gained in the short term do not justify the permanent loss of agricultural and ranching jobs, the negative health effects or the profound environmental damage. Please -- lend your support to the growing movement to end phosphate strip mining and protect Floridians' health, lands and wildlife.

Sincerely,

Jerri Jarvis

Manatee County Officials

Dear Manatee County Officials,

I am writing to let you know that I do not want one more square inch of Florida's precious land dug up and poisoned by phosphate strip mining. The state's already home to the world's largest phosphate mine, and Mosaic seeks to mine an additional 50,000 acres. I urge you to do everything in your power to stop this destructive industry.

Phosphate strip mining is not in the public interest. It completely destroys landscapes and wildlife habitat, including wetlands, forests and streams needed by endangered species. It uses exorbitant amounts of precious groundwater, jeopardizing future water supplies and depriving wetlands, streams and rivers of water. And it creates approximately 30 million tons of radioactive byproduct each year that must be stored in 200-foot-tall phosphogypsum stacks and toxic waste ponds called "clay settling areas," which are slime ponds that will permanently cover approximately 40 percent of an average mine site. These are the largest repositories of hazardous waste in the nation.

Manatee County Officials

Dear Manatee County Officials,

I am writing to let you know that I do not want one more square inch of Florida's precious land dug up and poisoned by phosphate strip mining. The state's already home to the world's largest phosphate mine, and Mosaic seeks to mine an additional 50,000 acres. I urge you to do everything in your power to stop this destructive industry.

Phosphate strip mining is not in the public interest. It completely destroys landscapes and wildlife habitat, including wetlands, forests and streams needed by endangered species. It uses exorbitant amounts of precious groundwater, jeopardizing future water supplies and depriving wetlands, streams and rivers of water. And it creates approximately 30 million tons of radioactive byproduct each year that must be stored in 200-foot-tall phosphogypsum stacks and toxic waste ponds called "clay settling areas," which are slime ponds that will permanently cover approximately 40 percent of an average mine site. These are the largest repositories of hazardous waste in the nation.

With Florida's phosphate a finite resource, the few mining jobs gained in the short term do not justify the permanent loss of agricultural and ranching jobs, the negative health effects or the profound environmental damage. Please -- lend your support to the growing movement to end phosphate strip mining and protect Floridians' health, lands and wildlife.

Sincerely,

Paul Tuff

I am writing to let you know that I do not want one more square inch of Florida's precious land dug up and poisoned by phosphate strip mining. The state's already home to the world's largest phosphate mine, and Mosaic seeks to mine an additional 50,000 acres. I urge you to do everything in your power to stop this destructive industry.

Phosphate strip mining is not in the public interest. It completely destroys landscapes and wildlife habitat, including wetlands, forests and streams needed by endangered species. It uses exorbitant amounts of precious groundwater, jeopardizing future water supplies and depriving wetlands, streams and rivers of water. And it creates approximately 30 million tons of radioactive byproduct each year that must be stored in 200-foot-tall phosphogypsum stacks and toxic waste ponds called "clay settling areas," which are slime ponds that will permanently cover approximately 40 percent of an average mine site. These are the largest repositories of hazardous waste in the nation.

With Florida's phosphate a finite resource, the few mining jobs gained in the short term do not justify the permanent loss of agricultural and ranching jobs, the negative health effects or the profound environmental damage. Please -- lend your support to the growing movement to end phosphate strip mining and protect Floridians' health, lands and wildlife.

Sincerely,

Heidi Carton

And it creates approximately 30 million tons of radioactive byproduct each year that must be stored in 200-foot-tall phosphogypsum stacks and toxic waste ponds called "clay settling areas," which are slime ponds that will permanently cover approximately 40 percent of an average mine site. These are the largest repositories of hazardous waste in the nation.

With Florida's phosphate a finite resource, the few mining jobs gained in the short term do not justify the permanent loss of agricultural and ranching jobs, the negative health effects or the profound environmental damage. Please -- lend your support to the growing movement to end phosphate strip mining and protect Floridians' health, lands and wildlife.

Sincerely,

James Sullivan

Chicago, IL 60630

Manatee County Officials

Dear Manatee County Officials,

I am writing to let you know that I do not want one more square inch of Florida's precious land dug up and poisoned by phosphate strip mining. The state's already home to the world's largest phosphate mine, and Mosaic seeks to mine an additional 50,000 acres. I urge you to do everything in your power to stop this destructive industry.

Phosphate strip mining is not in the public interest. It completely destroys landscapes and wildlife habitat, including wetlands, forests and streams needed by endangered species. It uses exorbitant amounts of precious groundwater, jeopardizing future water supplies and depriving wetlands, streams and rivers of water. And it creates approximately 30 million tons of radioactive byproduct each year that must be stored in 200-foot-tall phosphogypsum stacks and toxic waste ponds called "clay settling areas," which are slime ponds that will permanently cover approximately 40 percent of an average mine site. These are the largest repositories of hazardous waste in the nation.

With Florida's phosphate a finite resource, the few mining jobs gained in the short term do not justify the permanent loss of agricultural and ranching jobs, the negative health effects or the profound environmental damage. The state's already home to the world's largest phosphate mine, and Mosaic seeks to mine an additional 50,000 acres. I urge you to do everything in your power to stop this destructive industry.

Phosphate strip mining is not in the public interest. It completely destroys landscapes and wildlife habitat, including wetlands, forests and streams needed by endangered species. It uses exorbitant amounts of precious groundwater, jeopardizing future water supplies and depriving wetlands, streams and rivers of water. And it creates approximately 30 million tons of radioactive byproduct each year that must be stored in 200-foot-tall phosphogypsum stacks and toxic waste ponds called "clay settling areas," which are slime ponds that will permanently cover approximately 40 percent of an average mine site. These are the largest repositories of hazardous waste in the nation.

With Florida's phosphate a finite resource, the few mining jobs gained in the short term do not justify the permanent loss of agricultural and ranching jobs, the negative health effects or the profound environmental damage. Please -- lend your support to the growing movement to end phosphate strip mining and protect Floridians' health, lands and wildlife.

Sincerely,

mauricio carvajal

It uses exorbitant amounts of precious groundwater, jeopardizing future water supplies and depriving wetlands, streams and rivers of water. And it creates approximately 30 million tons of radioactive byproduct each year that must be stored in 200-foot-tall phosphogypsum stacks and toxic waste ponds called "clay settling areas," which are slime ponds that will permanently cover approximately 40 percent of an average mine site. These are the largest repositories of hazardous waste in the nation.

With Florida's phosphate a finite resource, the few mining jobs gained in the short term do not justify the permanent loss of agricultural and ranching jobs, the negative health effects or the profound environmental damage. Please -- lend your support to the growing movement to end phosphate strip mining and protect Floridians' health, lands and wildlife.

Sincerely,

JEAN PUBLIEEE

Manatee County Officials

Dear Manatee County Officials,

I am writing to let you know that I do not want one more square inch of Florida's precious land dug up and poisoned by phosphate strip mining. The state's already home to the world's largest phosphate mine, and Mosaic seeks to mine an additional 50,000 acres. I urge you to do everything in your power to stop this destructive industry.

Phosphate strip mining is not in the public interest. It completely destroys landscapes and wildlife habitat, including wetlands, forests and streams needed by endangered species. It uses exorbitant amounts of precious groundwater, jeopardizing future water supplies and depriving wetlands, streams and rivers of water. And it creates approximately 30 million tons of radioactive byproduct each year that must be stored in 200-foot-tall phosphogypsum stacks and toxic waste ponds called "clay settling areas," which are slime ponds that will permanently cover approximately 40 percent of an average mine site. These are the largest repositories of hazardous waste in the nation.

Manatee County Officials

Dear Manatee County Officials,

I am writing to let you know that I do not want one more square inch of Florida's precious land dug up and poisoned by phosphate strip mining. The state's already home to the world's largest phosphate mine, and Mosaic seeks to mine an additional 50,000 acres. I urge you to do everything in your power to stop this destructive industry.

Phosphate strip mining is not in the public interest. It completely destroys landscapes and wildlife habitat, including wetlands, forests and streams needed by endangered species. It uses exorbitant amounts of precious groundwater, jeopardizing future water supplies and depriving wetlands, streams and rivers of water. And it creates approximately 30 million tons of radioactive byproduct each year that must be stored in 200-foot-tall phosphogypsum stacks and toxic waste ponds called "clay settling areas," which are slime ponds that will permanently cover approximately 40 percent of an average mine site. These are the largest repositories of hazardous waste in the nation.

With Florida's phosphate a finite resource, the few mining jobs gained in the short term do not justify the permanent loss of agricultural and ranching jobs, the negative health effects or the profound environmental damage. Please -- lend your support to the growing movement to end phosphate strip mining and protect Floridians' health, lands and wildlife.

Sincerely,

n/a Lise Emond

The state's already home to the world's largest phosphate mine, and Mosaic seeks to mine an additional 50,000 acres. I urge you to do everything in your power to stop this destructive industry.

Phosphate strip mining is not in the public interest. It completely destroys landscapes and wildlife habitat, including wetlands, forests and streams needed by endangered species. It uses exorbitant amounts of precious groundwater, jeopardizing future water supplies and depriving wetlands, streams and rivers of water. And it creates approximately 30 million tons of radioactive byproduct each year that must be stored in 200-foot-tall phosphogypsum stacks and toxic waste ponds called "clay settling areas," which are slime ponds that will permanently cover approximately 40 percent of an average mine site. These are the largest repositories of hazardous waste in the nation.

With Florida's phosphate a finite resource, the few mining jobs gained in the short term do not justify the permanent loss of agricultural and ranching jobs, the negative health effects or the profound environmental damage. Please -- lend your support to the growing movement to end phosphate strip mining and protect Floridians' health, lands and wildlife.

Sincerely,

Susan Schueller

And it creates approximately 30 million tons of radioactive byproduct each year that must be stored in 200-foot-tall phosphogypsum stacks and toxic waste ponds called "clay settling areas," which are slime ponds that will permanently cover approximately 40 percent of an average mine site. These are the largest repositories of hazardous waste in the nation.

With Florida's phosphate a finite resource, the few mining jobs gained in the short term do not justify the permanent loss of agricultural and ranching jobs, the negative health effects or the profound environmental damage. Please -- lend your support to the growing movement to end phosphate strip mining and protect Floridians' health, lands and wildlife.

Sincerely,

Manatee County Officials

Dear Manatee County Officials,

I am writing to let you know that I do not want one more square inch of Florida's precious land dug up and poisoned by phosphate strip mining. The state's already home to the world's largest phosphate mine, and Mosaic seeks to mine an additional 50,000 acres. I urge you to do everything in your power to stop this destructive industry.

Phosphate strip mining is not in the public interest. It completely destroys landscapes and wildlife habitat, including wetlands, forests and streams needed by endangered species. It uses exorbitant amounts of precious groundwater, jeopardizing future water supplies and depriving wetlands, streams and rivers of water. And it creates approximately 30 million tons of radioactive byproduct each year that must be stored in 200-foot-tall phosphogypsum stacks and toxic waste ponds called "clay settling areas," which are slime ponds that will permanently cover approximately 40 percent of an average mine site. These are the largest repositories of hazardous waste in the nation.

With Florida's phosphate a finite resource, the few mining jobs gained in the short term do not justify the permanent loss of agricultural and ranching jobs, the negative health effects or the profound environmental damage. And it creates approximately 30 million tons of radioactive byproduct each year that must be stored in 200-foot-tall phosphogypsum stacks and toxic waste ponds called "clay settling areas," which are slime ponds that will permanently cover approximately 40 percent of an average mine site. These are the largest repositories of hazardous waste in the nation.

With Florida's phosphate a finite resource, the few mining jobs gained in the short term do not justify the permanent loss of agricultural and ranching jobs, the negative health effects or the profound environmental damage. Please -- lend your support to the growing movement to end phosphate strip mining and protect Floridians' health, lands and wildlife.

Sincerely,

Charyse Kirby

Manatee County Officials

Dear Manatee County Officials,

I am writing to let you know that I do not want one more square inch of Florida's precious land dug up and poisoned by phosphate strip mining. The state's already home to the world's largest phosphate mine, and Mosaic seeks to mine an additional 50,000 acres. I urge you to do everything in your power to stop this destructive industry.

Phosphate strip mining is not in the public interest. It completely destroys landscapes and wildlife habitat, including wetlands, forests and streams needed by endangered species. It uses exorbitant amounts of precious groundwater, jeopardizing future water supplies and depriving wetlands, streams and rivers of water. And it creates approximately 30 million tons of radioactive byproduct each year that must be stored in 200-foot-tall phosphogypsum stacks and toxic waste ponds called "clay settling areas," which are slime ponds that will permanently cover approximately 40 percent of an average mine site. These are the largest repositories of hazardous waste in the nation.

Manatee County Officials

Dear Manatee County Officials,

I am writing to let you know that I do not want one more square inch of Florida's precious land dug up and poisoned by phosphate strip mining. The state's already home to the world's largest phosphate mine, and Mosaic seeks to mine an additional 50,000 acres. I urge you to do everything in your power to stop this destructive industry.

Phosphate strip mining is not in the public interest. It completely destroys landscapes and wildlife habitat, including wetlands, forests and streams needed by endangered species. It uses exorbitant amounts of precious groundwater, jeopardizing future water supplies and depriving wetlands, streams and rivers of water. And it creates approximately 30 million tons of radioactive byproduct each year that must be stored in 200-foot-tall phosphogypsum stacks and toxic waste ponds called "clay settling areas," which are slime ponds that will permanently cover approximately 40 percent of an average mine site. These are the largest repositories of hazardous waste in the nation.

With Florida's phosphate a finite resource, the few mining jobs gained in the short term do not justify the permanent loss of agricultural and ranching jobs, the negative health effects or the profound environmental damage. Please -- lend your support to the growing movement to end phosphate strip mining and protect Floridians' health, lands and wildlife.

Sincerely,

maria gritsch

Dear Manatee County Officials,

I am writing to let you know that I do not want one more square inch of Florida's precious land dug up and poisoned by phosphate strip mining. The state's already home to the world's largest phosphate mine, and Mosaic seeks to mine an additional 50,000 acres. I urge you to do everything in your power to stop this destructive industry.

Phosphate strip mining is not in the public interest. It completely destroys landscapes and wildlife habitat, including wetlands, forests and streams needed by endangered species. It uses exorbitant amounts of precious groundwater, jeopardizing future water supplies and depriving wetlands, streams and rivers of water. And it creates approximately 30 million tons of radioactive byproduct each year that must be stored in 200-foot-tall phosphogypsum stacks and toxic waste ponds called "clay settling areas," which are slime ponds that will permanently cover approximately 40 percent of an average mine site. These are the largest repositories of hazardous waste in the nation.

With Florida's phosphate a finite resource, the few mining jobs gained in the short term do not justify the permanent loss of agricultural and ranching jobs, the negative health effects or the profound environmental damage. Please -- lend your support to the growing movement to end phosphate strip mining and protect Floridians' health, lands and wildlife.

Sincerely,

Mr john beal

Manatee County Officials

Dear Manatee County Officials,

The poisoning of Florida's land by phosphate strip mining must end. The few mining jobs created in the short term to extract a finite resource do not justify the profound environmental destruction and negative health effects the mining causes. Nor do these few jobs offset those lost in agriculture, ranching and recreation. The state's already home to the world's largest phosphate mine, and Mosaic seeks to mine an additional 50,000 acres. I urge you to do everything in your power to stop this destructive industry.

Phosphate strip mining is not in the public interest. It completely destroys landscapes and wildlife habitat, including wetlands, forests and streams needed by endangered species. It uses exorbitant amounts of precious groundwater, jeopardizing future water supplies and depriving wetlands, streams and rivers of water. And it creates approximately 30 million tons of radioactive byproduct each year that must be stored in 200-foot-tall phosphogypsum stacks and toxic waste ponds called "clay settling areas," which are slime ponds that will permanently cover approximately 40 percent of an average mine site. These are the largest repositories of hazardous waste in the nation.

With Florida's phosphate a finite resource, the few mining jobs gained in the short term do not justify the permanent loss of agricultural and ranching jobs, the negative health effects or the profound environmental damage. Please -- lend your support to the growing movement to end phosphate strip mining and protect Floridians' health, lands and wildlife.

Sincerely,

Winifred Tonione

Manatee County Officials

Dear Manatee County Officials,

I am writing to let you know that I do not want one more square inch of Florida's precious land dug up and poisoned by phosphate strip mining. The state's already home to the world's largest phosphate mine, and Mosaic seeks to mine an additional 50,000 acres. I urge you to do everything in your power to stop this destructive industry.

Phosphate strip mining is not in the public interest. It completely destroys landscapes and wildlife habitat, including wetlands, forests and streams needed by endangered species. It uses exorbitant amounts of precious groundwater, jeopardizing future water supplies and depriving wetlands, streams and rivers of water. And it creates approximately 30 million tons of radioactive byproduct each year that must be stored in 200-foot-tall phosphogypsum stacks and toxic waste ponds called "clay settling areas," which are slime ponds that will permanently cover approximately 40 percent of an average mine site. These are the largest repositories of hazardous waste in the nation.

With Florida's phosphate a finite resource, the few mining jobs gained in the short term do not justify the permanent loss of agricultural and ranching jobs, the negative health effects or the profound environmental damage. Manatee County Officials

Dear Manatee County Officials,

I am writing to let you know that I do not want one more square inch of Florida's precious land dug up and poisoned by phosphate strip mining. The state's already home to the world's largest phosphate mine, and Mosaic seeks to mine an additional 50,000 acres. I urge you to do everything in your power to stop this destructive industry.

Phosphate strip mining is not in the public interest. It completely destroys landscapes and wildlife habitat, including wetlands, forests and streams needed by endangered species. It uses exorbitant amounts of precious groundwater, jeopardizing future water supplies and depriving wetlands, streams and rivers of water. And it creates approximately 30 million tons of radioactive byproduct each year that must be stored in 200-foot-tall phosphogypsum stacks and toxic waste ponds called "clay settling areas," which are slime ponds that will permanently cover approximately 40 percent of an average mine site. These are the largest repositories of hazardous waste in the nation.

With Florida's phosphate a finite resource, the few mining jobs gained in the short term do not justify the permanent loss of agricultural and ranching jobs, the negative health effects or the profound environmental damage. Please -- lend your support to the growing movement to end phosphate strip mining and protect Floridians' health, lands and wildlife.

Sincerely,

joe mcmaster

Phosphate strip mining is not in the public interest. It completely destroys landscapes and wildlife habitat, including wetlands, forests and streams needed by endangered species. It uses exorbitant amounts of precious groundwater, jeopardizing future water supplies and depriving wetlands, streams and rivers of water. And it creates approximately 30 million tons of radioactive byproduct each year that must be stored in 200-foot-tall phosphogypsum stacks and toxic waste ponds called "clay settling areas," which are slime ponds that will permanently cover approximately 40 percent of an average mine site. These are the largest repositories of hazardous waste in the nation.

With Florida's phosphate a finite resource, the few mining jobs gained in the short term do not justify the permanent loss of agricultural and ranching jobs, the negative health effects or the profound environmental damage. Please -- lend your support to the growing movement to end phosphate strip mining and protect Floridians' health, lands and wildlife.

Sincerely,

Annette Barbier

Manatee County Officials

Dear Manatee County Officials,

I am writing to let you know that I do not want one more square inch of Florida's precious land dug up and poisoned by phosphate strip mining. The state's already home to the world's largest phosphate mine, and Mosaic seeks to mine an additional 50,000 acres. I urge you to do everything in your power to stop this destructive industry.

Phosphate strip mining is not in the public interest. It completely destroys landscapes and wildlife habitat, including wetlands, forests and streams needed by endangered species. It uses exorbitant amounts of precious groundwater, jeopardizing future water supplies and depriving wetlands, streams and rivers of water. And it creates approximately 30 million tons of radioactive byproduct each year that must be stored in 200-foot-tall phosphogypsum stacks and toxic waste ponds called "clay settling areas," which are slime ponds that will permanently cover approximately 40 percent of an average mine site. These are the largest repositories of hazardous waste in the nation.

With Florida's phosphate a finite resource, the few mining jobs gained in the short term do not justify the permanent loss of agricultural and ranching jobs, the negative health effects or the profound environmental damage. Please -- lend your support to the growing movement to end phosphate strip mining and protect Floridians' health, lands and wildlife.

Sincerely,

Manatee County Officials

Dear Manatee County Officials,

I am writing to let you know that I do not want one more square inch of Florida's precious land dug up and poisoned by phosphate strip mining. The state's already home to the world's largest phosphate mine, and Mosaic seeks to mine an additional 50,000 acres. I urge you to do everything in your power to stop this destructive industry.

Phosphate strip mining is not in the public interest. It completely destroys landscapes and wildlife habitat, including wetlands, forests and streams needed by endangered species. Manatee County Officials

Dear Manatee County Officials,

I am writing to let you know that I do not want one more square inch of Florida's precious land dug up and poisoned by phosphate strip mining. The state's already home to the world's largest phosphate mine, and Mosaic seeks to mine an additional 50,000 acres. I urge you to do everything in your power to stop this destructive industry.

Phosphate strip mining is not in the public interest. It completely destroys landscapes and wildlife habitat, including wetlands, forests and streams needed by endangered species. It uses exorbitant amounts of precious groundwater, jeopardizing future water supplies and depriving wetlands, streams and rivers of water. And it creates approximately 30 million tons of radioactive byproduct each year that must be stored in 200-foot-tall phosphogypsum stacks and toxic waste ponds called "clay settling areas," which are slime ponds that will permanently cover approximately 40 percent of an average mine site. These are the largest repositories of hazardous waste in the nation.

With Florida's phosphate a finite resource, the few mining jobs gained in the short term do not justify the permanent loss of agricultural and ranching jobs, the negative health effects or the profound environmental damage. Please -- lend your support to the growing movement to end phosphate strip mining and protect Floridians' health, lands and wildlife.

Sincerely,

Dear Manatee County Officials,

I am writing to let you know that I do not want one more square inch of Florida's precious land dug up and poisoned by phosphate strip mining. The state's already home to the world's largest phosphate mine, and Mosaic seeks to mine an additional 50,000 acres. I urge you to do everything in your power to stop this destructive industry.

Phosphate strip mining is not in the public interest. It completely destroys landscapes and wildlife habitat, including wetlands, forests and streams needed by endangered species. It uses exorbitant amounts of precious groundwater, jeopardizing future water supplies and depriving wetlands, streams and rivers of water. And it creates approximately 30 million tons of radioactive byproduct each year that must be stored in 200-foot-tall phosphogypsum stacks and toxic waste ponds called "clay settling areas," which are slime ponds that will permanently cover approximately 40 percent of an average mine site. These are the largest repositories of hazardous waste in the nation.

With Florida's phosphate a finite resource, the few mining jobs gained in the short term do not justify the permanent loss of agricultural and ranching jobs, the negative health effects or the profound environmental damage. Please -- lend your support to the growing movement to end phosphate strip mining and protect Floridians' health, lands and wildlife.

Sincerely,

Politti Ashcraft

It uses exorbitant amounts of precious groundwater, jeopardizing future water supplies and depriving wetlands, streams and rivers of water. And it creates approximately 30 million tons of radioactive byproduct each year that must be stored in 200-foot-tall phosphogypsum stacks and toxic waste ponds called "clay settling areas," which are slime ponds that will permanently cover approximately 40 percent of an average mine site. These are the largest repositories of hazardous waste in the nation.

With Florida's phosphate a finite resource, the few mining jobs gained in the short term do not justify the permanent loss of agricultural and ranching jobs, the negative health effects or the profound environmental damage. Please -- lend your support to the growing movement to end phosphate strip mining and protect Floridians' health, lands and wildlife.

Sincerely,

kajsa ingelsson

Manatee County Officials

Dear Manatee County Officials,

I am writing to let you know that I do not want one more square inch of Florida's precious land dug up and poisoned by phosphate strip mining. The state's already home to the world's largest phosphate mine, and Mosaic seeks to mine an additional 50,000 acres. I urge you to do everything in your power to stop this destructive industry.

Phosphate strip mining is not in the public interest. It completely destroys landscapes and wildlife habitat, including wetlands, forests and streams needed by endangered species. It uses exorbitant amounts of precious groundwater, jeopardizing future water supplies and depriving wetlands, streams and rivers of water. And it creates approximately 30 million tons of radioactive byproduct each year that must be stored in 200-foot-tall phosphogypsum stacks and toxic waste ponds called "clay settling areas," which are slime ponds that will permanently cover approximately 40 percent of an average mine site. These are the largest repositories of hazardous waste in the nation.

Manatee County Officials

Dear Manatee County Officials,

I am writing to let you know that I do not want one more square inch of Florida's precious land dug up and poisoned by phosphate strip mining. The state's already home to the world's largest phosphate mine, and Mosaic seeks to mine an additional 50,000 acres. I urge you to do everything in your power to stop this destructive industry.

Phosphate strip mining is not in the public interest. It completely destroys landscapes and wildlife habitat, including wetlands, forests and streams needed by endangered species. It uses exorbitant amounts of precious groundwater, jeopardizing future water supplies and depriving wetlands, streams and rivers of water. And it creates approximately 30 million tons of radioactive byproduct each year that must be stored in 200-foot-tall phosphogypsum stacks and toxic waste ponds called "clay settling areas," which are slime ponds that will permanently cover approximately 40 percent of an average mine site. These are the largest repositories of hazardous waste in the nation.

With Florida's phosphate a finite resource, the few mining jobs gained in the short term do not justify the permanent loss of agricultural and ranching jobs, the negative health effects or the profound environmental damage. Please -- lend your support to the growing movement to end phosphate strip mining and protect Floridians' health, lands and wildlife.

Sincerely,

Debra Cassiero

Phosphate strip mining is not in the public interest. It completely destroys landscapes and wildlife habitat, including wetlands, forests and streams needed by endangered species. It uses exorbitant amounts of precious groundwater, jeopardizing future water supplies and depriving wetlands, streams and rivers of water. And it creates approximately 30 million tons of radioactive byproduct each year that must be stored in 200-foot-tall phosphogypsum stacks and toxic waste ponds called "clay settling areas," which are slime ponds that will permanently cover approximately 40 percent of an average mine site. These are the largest repositories of hazardous waste in the nation.

With Florida's phosphate a finite resource, the few mining jobs gained in the short term do not justify the permanent loss of agricultural and ranching jobs, the negative health effects or the profound environmental damage. Please -- lend your support to the growing movement to end phosphate strip mining and protect Floridians' health, lands and wildlife.

Sincerely,

suzanne ursula lebon

Manatee County Officials

Dear Manatee County Officials,

I am writing to let you know that I do not want one more square inch of Florida's precious land dug up and poisoned by phosphate strip mining. The state's already home to the world's largest phosphate mine, and Mosaic seeks to mine an additional 50,000 acres. I urge you to do everything in your power to stop this destructive industry.

I am writing to let you know that I do not want one more square inch of Florida's precious land dug up and poisoned by phosphate strip mining. The state's already home to the world's largest phosphate mine, and Mosaic seeks to mine an additional 50,000 acres. I urge you to do everything in your power to stop this destructive industry.

Phosphate strip mining is not in the public interest. It completely destroys landscapes and wildlife habitat, including wetlands, forests and streams needed by endangered species. It uses exorbitant amounts of precious groundwater, jeopardizing future water supplies and depriving wetlands, streams and rivers of water. And it creates approximately 30 million tons of radioactive byproduct each year that must be stored in 200-foot-tall phosphogypsum stacks and toxic waste ponds called "clay settling areas," which are slime ponds that will permanently cover approximately 40 percent of an average mine site. These are the largest repositories of hazardous waste in the nation.

With Florida's phosphate a finite resource, the few mining jobs gained in the short term do not justify the permanent loss of agricultural and ranching jobs, the negative health effects or the profound environmental damage. Please -- lend your support to the growing movement to end phosphate strip mining and protect Floridians' health, lands and wildlife.

Sincerely,

Janet Petermann

Phosphate strip mining is not in the public interest. It completely destroys landscapes and wildlife habitat, including wetlands, forests and streams needed by endangered species. It uses exorbitant amounts of precious groundwater, jeopardizing future water supplies and depriving wetlands, streams and rivers of water. And it creates approximately 30 million tons of radioactive byproduct each year that must be stored in 200-foot-tall phosphogypsum stacks and toxic waste ponds called "clay settling areas," which are slime ponds that will permanently cover approximately 40 percent of an average mine site. These are the largest repositories of hazardous waste in the nation.

With Florida's phosphate a finite resource, the few mining jobs gained in the short term do not justify the permanent loss of agricultural and ranching jobs, the negative health effects or the profound environmental damage. Please -- lend your support to the growing movement to end phosphate strip mining and protect Floridians' health, lands and wildlife.

Sincerely,

Ann Nixon

Manatee County Officials

Dear Manatee County Officials,

I am writing to let you know that I do not want one more square inch of Florida's precious land dug up and poisoned by phosphate strip mining. The state's already home to the world's largest phosphate mine, and Mosaic seeks to mine an additional 50,000 acres. I urge you to do everything in your power to stop this destructive industry.

Manatee County Officials

Dear Manatee County Officials,

I am writing to let you know that I do not want one more square inch of Florida's precious land dug up and poisoned by phosphate strip mining. The state's already home to the world's largest phosphate mine, and Mosaic seeks to mine an additional 50,000 acres. I urge you to do everything in your power to stop this destructive industry.

Phosphate strip mining is not in the public interest. It completely destroys landscapes and wildlife habitat, including wetlands, forests and streams needed by endangered species. It uses exorbitant amounts of precious groundwater, jeopardizing future water supplies and depriving wetlands, streams and rivers of water. And it creates approximately 30 million tons of radioactive byproduct each year that must be stored in 200-foot-tall phosphogypsum stacks and toxic waste ponds called "clay settling areas," which are slime ponds that will permanently cover approximately 40 percent of an average mine site. These are the largest repositories of hazardous waste in the nation.

With Florida's phosphate a finite resource, the few mining jobs gained in the short term do not justify the permanent loss of agricultural and ranching jobs, the negative health effects or the profound environmental damage. Please -- lend your support to the growing movement to end phosphate strip mining and protect Floridians' health, lands and wildlife.

Sincerely,

Dr joan holzer

Phosphate strip mining is not in the public interest. It completely destroys landscapes and wildlife habitat, including wetlands, forests and streams needed by endangered species. It uses exorbitant amounts of precious groundwater, jeopardizing future water supplies and depriving wetlands, streams and rivers of water. And it creates approximately 30 million tons of radioactive byproduct each year that must be stored in 200-foot-tall phosphogypsum stacks and toxic waste ponds called "clay settling areas," which are slime ponds that will permanently cover approximately 40 percent of an average mine site. These are the largest repositories of hazardous waste in the nation.

With Florida's phosphate a finite resource, the few mining jobs gained in the short term do not justify the permanent loss of agricultural and ranching jobs, the negative health effects or the profound environmental damage. Please -- lend your support to the growing movement to end phosphate strip mining and protect Floridians' health, lands and wildlife.

Sincerely,

Donna Smith

Manatee County Officials

Dear Manatee County Officials,

I am writing to let you know that I do not want one more square inch of Florida's precious land dug up and poisoned by phosphate strip mining. The state's already home to the world's largest phosphate mine, and Mosaic seeks to mine an additional 50,000 acres. I urge you to do everything in your power to stop this destructive industry.

And it creates approximately 30 million tons of radioactive byproduct each year that must be stored in 200-foot-tall phosphogypsum stacks and toxic waste ponds called "clay settling areas," which are slime ponds that will permanently cover approximately 40 percent of an average mine site. These are the largest repositories of hazardous waste in the nation.

With Florida's phosphate a finite resource, the few mining jobs gained in the short term do not justify the permanent loss of agricultural and ranching jobs, the negative health effects or the profound environmental damage. Please -- lend your support to the growing movement to end phosphate strip mining and protect Floridians' health, lands and wildlife.

Sincerely,

Deborah Anderson

Manatee County Officials

Dear Manatee County Officials,

I am writing to let you know that I do not want one more square inch of Florida's precious land dug up and poisoned by phosphate strip mining. The state's already home to the world's largest phosphate mine, and Mosaic seeks to mine an additional 50,000 acres. I urge you to do everything in your power to stop this destructive industry.

Phosphate strip mining is not in the public interest. It completely destroys landscapes and wildlife habitat, including wetlands, forests and streams needed by endangered species. It uses exorbitant amounts of precious groundwater, jeopardizing future water supplies and depriving wetlands, streams and rivers of water. And it creates approximately 30 million tons of radioactive byproduct each year that must be stored in 200-foot-tall phosphogypsum stacks and toxic waste ponds called "clay settling areas," which are slime ponds that will permanently cover approximately 40 percent of an average mine site. These are the largest repositories of hazardous waste in the nation.

With Florida's phosphate a finite resource, the few mining jobs gained in the short term do not justify the permanent loss of agricultural and ranching jobs, the negative health effects or the profound environmental damage. Manatee County Officials

Dear Manatee County Officials,

I am writing to let you know that I do not want one more square inch of Florida's precious land dug up and poisoned by phosphate strip mining. The state's already home to the world's largest phosphate mine, and Mosaic seeks to mine an additional 50,000 acres. I urge you to do everything in your power to stop this destructive industry.

Phosphate strip mining is not in the public interest. It completely destroys landscapes and wildlife habitat, including wetlands, forests and streams needed by endangered species. It uses exorbitant amounts of precious groundwater, jeopardizing future water supplies and depriving wetlands, streams and rivers of water. And it creates approximately 30 million tons of radioactive byproduct each year that must be stored in 200-foot-tall phosphogypsum stacks and toxic waste ponds called "clay settling areas," which are slime ponds that will permanently cover approximately 40 percent of an average mine site. These are the largest repositories of hazardous waste in the nation.

With Florida's phosphate a finite resource, the few mining jobs gained in the short term do not justify the permanent loss of agricultural and ranching jobs, the negative health effects or the profound environmental damage. Please -- lend your support to the growing movement to end phosphate strip mining and protect Floridians' health, lands and wildlife.

Sincerely,

Ariane Edmundson

I am writing to let you know that I do not want one more square inch of Florida's precious land dug up and poisoned by phosphate strip mining. The state's already home to the world's largest phosphate mine, and Mosaic seeks to mine an additional 50,000 acres. I urge you to do everything in your power to stop this destructive industry.

Phosphate strip mining is not in the public interest. It completely destroys landscapes and wildlife habitat, including wetlands, forests and streams needed by endangered species. It uses exorbitant amounts of precious groundwater, jeopardizing future water supplies and depriving wetlands, streams and rivers of water. And it creates approximately 30 million tons of radioactive byproduct each year that must be stored in 200-foot-tall phosphogypsum stacks and toxic waste ponds called "clay settling areas," which are slime ponds that will permanently cover approximately 40 percent of an average mine site. These are the largest repositories of hazardous waste in the nation.

With Florida's phosphate a finite resource, the few mining jobs gained in the short term do not justify the permanent loss of agricultural and ranching jobs, the negative health effects or the profound environmental damage. Please -- lend your support to the growing movement to end phosphate strip mining and protect Floridians' health, lands and wildlife.

Sincerely,

Linda Orr

And it creates approximately 30 million tons of radioactive byproduct each year that must be stored in 200-foot-tall phosphogypsum stacks and toxic waste ponds called "clay settling areas," which are slime ponds that will permanently cover approximately 40 percent of an average mine site. These are the largest repositories of hazardous waste in the nation.

With Florida's phosphate a finite resource, the few mining jobs gained in the short term do not justify the permanent loss of agricultural and ranching jobs, the negative health effects or the profound environmental damage. Please -- lend your support to the growing movement to end phosphate strip mining and protect Floridians' health, lands and wildlife.

Sincerely,

Sean Corrigan

Manatee County Officials

Dear Manatee County Officials,

I am writing to let you know that I do not want one more square inch of Florida's precious land dug up and poisoned by phosphate strip mining. The state's already home to the world's largest phosphate mine, and Mosaic seeks to mine an additional 50,000 acres. I urge you to do everything in your power to stop this destructive industry.

Phosphate strip mining is not in the public interest. It completely destroys landscapes and wildlife habitat, including wetlands, forests and streams needed by endangered species. It uses exorbitant amounts of precious groundwater, jeopardizing future water supplies and depriving wetlands, streams and rivers of water. And it creates approximately 30 million tons of radioactive byproduct each year that must be stored in 200-foot-tall phosphogypsum stacks and toxic waste ponds called "clay settling areas," which are slime ponds that will permanently cover approximately 40 percent of an average mine site. These are the largest repositories of hazardous waste in the nation.

With Florida's phosphate a finite resource, the few mining jobs gained in the short term do not justify the permanent loss of agricultural and ranching jobs, the negative health effects or the profound environmental damage. Manatee County Officials

Dear Manatee County Officials,

I am writing to let you know that I do not want one more square inch of Florida's precious land dug up and poisoned by phosphate strip mining. The state's already home to the world's largest phosphate mine, and Mosaic seeks to mine an additional 50,000 acres. I urge you to do everything in your power to stop this destructive industry.

Phosphate strip mining is not in the public interest. It completely destroys landscapes and wildlife habitat, including wetlands, forests and streams needed by endangered species. It uses exorbitant amounts of precious groundwater, jeopardizing future water supplies and depriving wetlands, streams and rivers of water. And it creates approximately 30 million tons of radioactive byproduct each year that must be stored in 200-foot-tall phosphogypsum stacks and toxic waste ponds called "clay settling areas," which are slime ponds that will permanently cover approximately 40 percent of an average mine site. These are the largest repositories of hazardous waste in the nation.

With Florida's phosphate a finite resource, the few mining jobs gained in the short term do not justify the permanent loss of agricultural and ranching jobs, the negative health effects or the profound environmental damage. Please -- lend your support to the growing movement to end phosphate strip mining and protect Floridians' health, lands and wildlife.

Sincerely,

Tika Bordelon

Dear Manatee County Officials,

I am writing to let you know that I do not want one more square inch of Florida's precious land dug up and poisoned by phosphate strip mining. The state's already home to the world's largest phosphate mine, and Mosaic seeks to mine an additional 50,000 acres. I urge you to do everything in your power to stop this destructive industry.

Phosphate strip mining is not in the public interest. It completely destroys landscapes and wildlife habitat, including wetlands, forests and streams needed by endangered species. It uses exorbitant amounts of precious groundwater, jeopardizing future water supplies and depriving wetlands, streams and rivers of water. And it creates approximately 30 million tons of radioactive byproduct each year that must be stored in 200-foot-tall phosphogypsum stacks and toxic waste ponds called "clay settling areas," which are slime ponds that will permanently cover approximately 40 percent of an average mine site. These are the largest repositories of hazardous waste in the nation.

With Florida's phosphate a finite resource, the few mining jobs gained in the short term do not justify the permanent loss of agricultural and ranching jobs, the negative health effects or the profound environmental damage. Please -- lend your support to the growing movement to end phosphate strip mining and protect Floridians' health, lands and wildlife.

Sincerely,

Claudia Reed
P.O. Box 2242
Pineland, FL 33945

The state's already home to the world's largest phosphate mine, and Mosaic seeks to mine an additional 50,000 acres. I urge you to do everything in your power to stop this destructive industry.

Phosphate strip mining is not in the public interest. It completely destroys landscapes and wildlife habitat, including wetlands, forests and streams needed by endangered species. It uses exorbitant amounts of precious groundwater, jeopardizing future water supplies and depriving wetlands, streams and rivers of water. And it creates approximately 30 million tons of radioactive byproduct each year that must be stored in 200-foot-tall phosphogypsum stacks and toxic waste ponds called "clay settling areas," which are slime ponds that will permanently cover approximately 40 percent of an average mine site. These are the largest repositories of hazardous waste in the nation.

With Florida's phosphate a finite resource, the few mining jobs gained in the short term do not justify the permanent loss of agricultural and ranching jobs, the negative health effects or the profound environmental damage. Please -- lend your support to the growing movement to end phosphate strip mining and protect Floridians' health, lands and wildlife.

Sincerely,

Jonathan Mitchell

Manatee County Officials

Dear Manatee County Officials,

I am writing to let you know that I do not want one more square inch of Florida's precious land dug up and poisoned by phosphate strip mining. The state's already home to the world's largest phosphate mine, and Mosaic seeks to mine an additional 50,000 acres. I urge you to do everything in your power to stop this destructive industry.

Phosphate strip mining is not in the public interest. It completely destroys landscapes and wildlife habitat, including wetlands, forests and streams needed by endangered species. It uses exorbitant amounts of precious groundwater, jeopardizing future water supplies and depriving wetlands, streams and rivers of water. And it creates approximately 30 million tons of radioactive byproduct each year that must be stored in 200-foot-tall phosphogypsum stacks and toxic waste ponds called "clay settling areas," which are slime ponds that will permanently cover approximately 40 percent of an average mine site. These are the largest repositories of hazardous waste in the nation.

With Florida's phosphate a finite resource, the few mining jobs gained in the short term do not justify the permanent loss of agricultural and ranching jobs, the negative health effects or the profound environmental damage. Please -- lend your support to the growing movement to end phosphate strip mining and protect Floridians' health, lands and wildlife.

Sincerely,

Ms. Lindie Brown

Phosphate strip mining is not in the public interest. It completely destroys landscapes and wildlife habitat, including wetlands, forests and streams needed by endangered species. It uses exorbitant amounts of precious groundwater, jeopardizing future water supplies and depriving wetlands, streams and rivers of water. And it creates approximately 30 million tons of radioactive byproduct each year that must be stored in 200-foot-tall phosphogypsum stacks and toxic waste ponds called "clay settling areas," which are slime ponds that will permanently cover approximately 40 percent of an average mine site. These are the largest repositories of hazardous waste in the nation.

With Florida's phosphate a finite resource, the few mining jobs gained in the short term do not justify the permanent loss of agricultural and ranching jobs, the negative health effects or the profound environmental damage. Please -- lend your support to the growing movement to end phosphate strip mining and protect Floridians' health, lands and wildlife.

Sincerely,

Jennifer Sellers

Manatee County Officials

Dear Manatee County Officials,

I am writing to let you know that I do not want one more square inch of Florida's precious land dug up and POISONED by phosphate strip mining. The state's already home to the world's largest phosphate mine, and Mosaic (the largest phosphate mining company in Florida) seeks to mine an additional 50,000 acres. I urge you to do everything in your power to stop this destructive industry.

Phosphate mining is one of the most destructive practices on Earth -- a brutal process that completely destroys landscapes and leaves behind 200-foot-tall, radioactive waste piles, which put people and wildlife at risk.

On Aug. 27, 2016, a sinkhole opened under one of these waste piles, causing more than 200 MILLION GALLONS OF CONTAMINATED WASTEWATER to enter the Floridan Aquifer. It's not the first time the state's main source of drinking water has been imperiled by the phosphate industry, but we need you to make it the last.

Mosaic wants to dig up an additional 50,000 acres of Florida's beautiful, biodiverse lands, creating more radioactive waste. But this incident shows that MOSAIC CAN'T EVEN HANDLE THE RADIOACTIVE WASTE IT CURRENTLY GENERATES. Letting it proceed in raping this land and screwing the population is nothing but insane, or ... someone's on the take from them.

Phosphate strip mining is not in the public interest. It completely destroys landscapes and wildlife habitat, including wetlands, forests and streams needed by endangered species. It uses exorbitant amounts of precious groundwater, jeopardizing future water supplies and depriving wetlands, streams and rivers of water. Florida already is near-crisis on availability of freshwater, without the Mosaic operation considered at all. And it creates approximately 30 million tons of RADIOACTIVE byproduct each year that must be stored in 200-foot-tall phosphogypsum stacks and toxic waste ponds called "clay settling areas," which are slime ponds that will permanently cover approximately 40 percent of an average mine site. These are the largest repositories of HAZARDOUS WASTE in the nation.

With Florida's phosphate a finite resource, the few mining jobs gained in the short term do not justify the permanent loss of agricultural and ranching jobs, the negative health effects or the profound environmental damage

Corporations are draining the life out of our planet's resources (and, by extension, humans) worldwide, and their for-profit greed ALWAYS politically overwhelms public interest. You MUST support the growing movement to end phosphate strip mining and protect Floridians' health, lands and wildlife - and you MUST do everything in your power to stop this destructive industry.

Sincerely,

Dale Sloat
320 Hudson Avenue
Hopatcong, NJ 07843

Manatee County Officials

Dear Manatee County Officials,

I am writing to let you know that I do not want one more square inch of Florida's precious land dug up and poisoned by phosphate strip mining. The state's already home to the world's largest phosphate mine, and Mosaic seeks to mine an additional 50,000 acres. I urge you to do everything in your power to stop this destructive industry.

Phosphate strip mining is not in the public interest. It completely destroys landscapes and wildlife habitat, including wetlands, forests and streams needed by endangered species. It uses exorbitant amounts of precious groundwater, jeopardizing future water supplies and depriving wetlands, streams and rivers of water. And it creates approximately 30 million tons of radioactive byproduct each year that must be stored in 200-foot-tall phosphogypsum stacks and toxic waste ponds called "clay settling areas," which are slime ponds that will permanently cover approximately 40 percent of an average mine site. These are the largest repositories of hazardous waste in the nation.

With Florida's phosphate a finite resource, the few mining jobs gained in the short term do not justify the permanent loss of agricultural and ranching jobs, the negative health effects or the profound environmental damage. Please -- lend your support to the growing movement to end phosphate strip mining and protect Floridians' health, lands and wildlife.

Sincerely,

lena maristo

Phosphate strip mining is not in the public interest. It completely destroys landscapes and wildlife habitat, including wetlands, forests and streams needed by endangered species. It uses exorbitant amounts of precious groundwater, jeopardizing future water supplies and depriving wetlands, streams and rivers of water. And it creates approximately 30 million tons of radioactive byproduct each year that must be stored in 200-foot-tall phosphogypsum stacks and toxic waste ponds called "clay settling areas," which are slime ponds that will permanently cover approximately 40 percent of an average mine site. These are the largest repositories of hazardous waste in the nation.

With Florida's phosphate a finite resource, the few mining jobs gained in the short term do not justify the permanent loss of agricultural and ranching jobs, the negative health effects or the profound environmental damage. Please -- lend your support to the growing movement to end phosphate strip mining and protect Floridians' health, lands and wildlife.

Sincerely,

Marion Kraus

Manatee County Officials

Dear Manatee County Officials,

I am writing to let you know that I do not want one more square inch of Florida's precious land dug up and poisoned by phosphate strip mining. The state's already home to the world's largest phosphate mine, and Mosaic seeks to mine an additional 50,000 acres. I urge you to do everything in your power to stop this destructive industry.

Manatee County Officials

Dear Manatee County Officials,

Florida's precious land should NOT be allowed to be excavated and poisoned by phosphate strip mining! The state is already home to the world's largest phosphate mine, and Mosaic seeks to mine an additional 50,000 acres. I urge you to do everything in your power to stop this destructive industry.

Phosphate strip mining is not in the public interest. It completely destroys landscapes and wildlife habitat, including wetlands, forests and streams needed by endangered species. It uses exorbitant amounts of precious groundwater, jeopardizing future water supplies and depriving wetlands, streams and rivers of water. And it creates approximately 30 million tons of radioactive byproduct each year that must be stored in 200-foot-tall phosphogypsum stacks and toxic waste ponds called "clay settling areas," which are slime ponds that will permanently cover approximately 40 percent of an average mine site. These are the largest repositories of hazardous waste in the nation.

With Florida's phosphate a finite resource, the few mining jobs gained in the short term do not justify the permanent loss of agricultural and ranching jobs, the negative health effects or the profound environmental damage. Please -- lend your support to the growing movement to end phosphate strip mining and protect Floridians' health, lands and wildlife.

Sincerely,

Mary Ann McDonald
2653 2nd Ave #3

It has become even more obvious that the State of Florida can or will not regulate and enforce laws designed to protect the public. The government has failed yet again and was complicity in covering up this threat to public health and safety.

Phosphate strip mining is not in the public interest. It completely destroys landscapes and wildlife habitat, including wetlands, forests and streams needed by endangered species. It uses exorbitant amounts of precious groundwater, jeopardizing future water supplies and depriving wetlands, streams and rivers of water. Phosphate strip mining is not in the public interest. It completely destroys landscapes and wildlife habitat, including wetlands, forests and streams needed by endangered species. It uses exorbitant amounts of precious groundwater, jeopardizing future water supplies and depriving wetlands, streams and rivers of water. And it creates approximately 30 million tons of radioactive byproduct each year that must be stored in 200-foot-tall phosphogypsum stacks and toxic waste ponds called "clay settling areas," which are slime ponds that will permanently cover approximately 40 percent of an average mine site. These are the largest repositories of hazardous waste in the nation.

With Florida's phosphate a finite resource, the few mining jobs gained in the short term do not justify the permanent loss of agricultural and ranching jobs, the negative health effects or the profound environmental damage. Please -- lend your support to the growing movement to end phosphate strip mining and protect Floridians' health, lands and wildlife.

Sincerely,

Josy Canova

Manatee County Officials

Dear Manatee County Officials,

I am writing to let you know that I do not want one more square inch of Florida's precious land dug up and poisoned by phosphate strip mining. The state's already home to the world's largest phosphate mine, and Mosaic seeks to mine an additional 50,000 acres. I urge you to do everything in your power to stop this destructive industry.

Dear Manatee County Officials,

I am writing to let you know that I do not want one more square inch of Florida's precious land dug up and poisoned by phosphate strip mining. The state's already home to the world's largest phosphate mine, and Mosaic seeks to mine an additional 50,000 acres. I urge you to do everything in your power to stop this destructive industry.

Phosphate strip mining is not in the public interest. It completely destroys landscapes and wildlife habitat, including wetlands, forests and streams needed by endangered species. It uses exorbitant amounts of precious groundwater, jeopardizing future water supplies and depriving wetlands, streams and rivers of water. And it creates approximately 30 million tons of radioactive byproduct each year that must be stored in 200-foot-tall phosphogypsum stacks and toxic waste ponds called "clay settling areas," which are slime ponds that will permanently cover approximately 40 percent of an average mine site. These are the largest repositories of hazardous waste in the nation.

With Florida's phosphate a finite resource, the few mining jobs gained in the short term do not justify the permanent loss of agricultural and ranching jobs, the negative health effects or the profound environmental damage. Please -- lend your support to the growing movement to end phosphate strip mining and protect Floridians' health, lands and wildlife.

Sincerely,

Peter R Curia

And it creates approximately 30 million tons of radioactive byproduct each year that must be stored in 200-foot-tall phosphogypsum stacks and toxic waste ponds called "clay settling areas," which are slime ponds that will permanently cover approximately 40 percent of an average mine site. These are the largest repositories of hazardous waste in the nation.

With Florida's phosphate a finite resource, the few mining jobs gained in the short term do not justify the permanent loss of agricultural and ranching jobs, the negative health effects or the profound environmental damage. Please -- lend your support to the growing movement to end phosphate strip mining and protect Floridians' health, lands and wildlife.

Sincerely,

Rob Gonzalez

Manatee County Officials

Dear Manatee County Officials,

I am writing to let you know that I do not want one more square inch of Florida's precious land dug up and poisoned by phosphate strip mining. The state's already home to the world's largest phosphate mine, and Mosaic seeks to mine an additional 50,000 acres. I urge you to do everything in your power to stop this destructive industry.

Phosphate strip mining is not in the public interest. It completely destroys landscapes and wildlife habitat, including wetlands, forests and streams needed by endangered species. It uses exorbitant amounts of precious groundwater, jeopardizing future water supplies and depriving wetlands, streams and rivers of water. And it creates approximately 30 million tons of radioactive byproduct each year that must be stored in 200-foot-tall phosphogypsum stacks and toxic waste ponds called "clay settling areas," which are slime ponds that will permanently cover approximately 40 percent of an average mine site. These are the largest repositories of hazardous waste in the nation.

With Florida's phosphate a finite resource, the few mining jobs gained in the short term do not justify the permanent loss of agricultural and ranching jobs, the negative health effects or the profound environmental damage. Dear Manatee County Officials,

I am writing to let you know that I do not want one more square inch of Florida's precious land dug up and poisoned by phosphate strip mining. The state's already home to the world's largest phosphate mine, and Mosaic seeks to mine an additional 50,000 acres. I urge you to do everything in your power to stop this destructive industry.

Phosphate strip mining is not in the public interest. It completely destroys landscapes and wildlife habitat, including wetlands, forests and streams needed by endangered species. It uses exorbitant amounts of precious groundwater, jeopardizing future water supplies and depriving wetlands, streams and rivers of water. And it creates approximately 30 million tons of radioactive byproduct each year that must be stored in 200-foot-tall phosphogypsum stacks and toxic waste ponds called "clay settling areas," which are slime ponds that will permanently cover approximately 40 percent of an average mine site. These are the largest repositories of hazardous waste in the nation.

With Florida's phosphate a finite resource, the few mining jobs gained in the short term do not justify the permanent loss of agricultural and ranching jobs, the negative health effects or the profound environmental damage. Please -- lend your support to the growing movement to end phosphate strip mining and protect Floridians' health, lands and wildlife.

Sincerely,

luigi bertoldo

Dear Manatee County Officials,

I am writing to let you know that I do not want one more square inch of Florida's precious land dug up and poisoned by phosphate strip mining. The state's already home to the world's largest phosphate mine, and Mosaic seeks to mine an additional 50,000 acres. I urge you to do everything in your power to stop this destructive industry.

Phosphate strip mining is not in the public interest. It completely destroys landscapes and wildlife habitat, including wetlands, forests and streams needed by endangered species. It uses exorbitant amounts of precious groundwater, jeopardizing future water supplies and depriving wetlands, streams and rivers of water. And it creates approximately 30 million tons of radioactive byproduct each year that must be stored in 200-foot-tall phosphogypsum stacks and toxic waste ponds called "clay settling areas," which are slime ponds that will permanently cover approximately 40 percent of an average mine site. These are the largest repositories of hazardous waste in the nation.

With Florida's phosphate a finite resource, the few mining jobs gained in the short term do not justify the permanent loss of agricultural and ranching jobs, the negative health effects or the profound environmental damage. Please -- lend your support to the growing movement to end phosphate strip mining and protect Floridians' health, lands and wildlife.

Sincerely,

Silvana De Angelis
