We're fitting the new style solar PV panels to the roof and storing energy from the sun into Tesla PowerWalls (batteries). This will run the house after sun goes down and during outages acts as a generator. Any excess energy created is sold back to FPL. The whole install attracts 30% tax relief. Should halve our power bill! Entire project is run by Tesla's new energy division.
Sent from my iPhone/ excuse spelling errors as I dictate most of my emails and at times am driving.
