Background Discussion

The attached Amendment #6 extends the period of performance to complete the obligations under the FDEM Grant (attached) from September 30, 2025 to June 30, 2026. This amendment follows the FDEM Watershed Planning Grant extension to the Federally Funded Subaward and Grant Agreement "Modification to Subgrant Agreement Between the Division of Emergency Management and Manatee County, a Political Subdivision" (see attached H0894, Project No. 4337-4-Pz).

After discussing with FAU staff and as approved by FDEM, the additional time was deemed necessary to complete the work in a timely manner. The FDEM grant allows Manatee County to pursue improving the Community Rating System points and achieve a higher rating. Currently, Manatee County is a level 5 in the CRS program. This grant will help the County to maintain its current rating and also potentially improve the rating which would provide lower the interest rate of flood insurance premiums to County taxpayers. In addition, this grant provides key elements towards a County wide Stormwater Master Plan.

Watershed Master Planning Initiative
Manatee County, Phase 2 FDEM Watershed Planning Grant
Scope of Work and Budget

Statement of Purpose

The Florida Division of Emergency Management's (the Division) Bureau of Mitigation prioritizes flood risk management as an integral part of its mission. The goals of this project are to assist local communities in developing a Watershed Master Plan for the purposes of moving up in the Community Rating System (CRS) of the National Flood Insurance Program (NFIP) and to increase resiliency in Florida communities.

This project is funded through the Hazard Mitigation Grant Program (HMGP) **DR-4337-004-P**, as approved by the Division and the Federal Emergency Management Agency (FEMA) to create and update Watershed Master Plans (WMPs) throughout the state of Florida.

The Project Manager for the Division will be:

Laura Dhuwe, Project Manager
Hazard Mitigation Grant Program
Florida Division of Emergency Management
850-879-0872
watershedplanning@em.myflorida.com

Scope of Work

The Division will coordinate with eligible Florida entities to produce a Watershed Master Plan (WMP) for credit under CRS. This project is preceded by the WMP Pilot Program, which consisted of research and the creation of guidance materials to ensure a consistent statewide approach to WMP development.

Guidance materials produced in the WMP Pilot Program can be found at: <https://www.floridadisaster.org/dem/mitigation/watershed-planning-initiative> or <https://www.fau.edu/engineering/research/cwr3/clearinghouse/>. The Sub-Recipient may use other materials provided by ISO and located at <https://fema.gov>. The Sub-Recipient shall follow the Credit Criteria for Element WMP under CRS Activity 452.b (please refer to the 2017 CRS Coordinator's Manual¹ and the 2021 Addendum to the Coordinator's Manual²). The Sub-Recipient will finalize the process by submitting their WMP to ISO/CRS for review and providing the Division with a signed letter from their applicable county's Local Mitigation Strategy (LMS) Chairperson attesting that the WMP will be adopted in the Sub-Recipient's next LMS update.

Tasks necessary to the completion of a WMP include:

Task 1 – Create Preliminary Project Plan based on Initial Flood Modeling, and Submit Draft WMP

The Sub-Recipient shall create a preliminary Project Plan, which is a narrative detailing how the initial flood modeling has sufficient detail on the data that went into the model, model specifications, and possible solutions for addressing flood risks that the model identified. There must be enough detail in the preliminary Project Plan to verify the required analysis has been completed. Specifically, the required analysis for the preliminary Project Plan shall include all the Minimum Criteria required for a creditable WMP³ under the two

categories of Data Inventory and Collection and Initial Flood Modeling as follows:

Data Inventory and Collection:

1. Data inventory (used for initial flood modeling):
 - a. Inventory of ground characteristics (e.g., soil type, impervious surfaces, wetlands)
 - b. Inventory of existing drainage system
 - c. Inventory of data availability
2. Locations of:
 - a. critical facilities, cultural/historical, and other places/areas of interest
 - b. vulnerable areas and their descriptions
 - c. natural and constructed drainage systems and channels
3. Existing regulations and plans in place for reducing flood risks

Initial Flood Modeling

4. For current/existing conditions land use, future land use, and the fully developed watershed scenarios:
 - a. Evaluations of the existing drainage system's runoff response from design storms using a hydrologic and hydraulic study with a hydrograph approach under current and predicted future land use conditions with assessments of the impacts of climate change and sea level rise for 10-, 25- & 100-year storm events
 - b. For currently fully developed watersheds: studies of existing development and the potential impact of any redevelopment
 - c. Evaluations of different management scenarios for at least the 100-year rainfall event for a fully developed watershed at a scale sufficient to determine local problems.
 - d. Determinations of the change in runoff from current to future, fully developed conditions
 - e. Recommendations for managing at least the 10-year and the 25-year rainfall events
5. For communities impacted by sea level rise: evaluations of the impacts of the NOAA Intermediate 2100 sea level rise scenario on the 100-year rainfall event
 - a. It is highly recommended to include 2 other scenarios up to 2100, which could be based on sea level for 2 time frames into the future or a number of feet of sea level rise within this timeframe.
6. The plan must include a strategy and action plan to address the results of the studies for:
 - a. controlling the timing of peak flows to prevent or minimize problems for the entire watershed due to new development, redevelopment, and fully developed conditions
 - b. the impact of climate change and sea level rise on fully developed conditions
 - c. at least the 25-year rainfall event in fully developed conditions, with a list of possible solutions for addressing at least the 25-year rainfall event
 - d. at least one event larger than the 25-year rainfall event, with a list of possible solutions for addressing this event
 - e. ensuring that flood hazards from the 10-year and the 25-year events are not increased by future development (the 2-year storm is also recommended).
7. The community must adopt the final plan.
8. If applicable, WMP plans more than 5 years old must be evaluated to ensure that they remain applicable to current conditions. For instance, are previous assumptions on hydrology, sea level rise and future land use still applicable.

Jurisdiction Specific Comments for Task 1:
